

# CoriolisMaster FCM2000 Mass Flowmeter

4-wire Compact Design  
Digital Signal Processor  
Transmitter Technology

**Coriolis Mass Flowmeters** are used for high precision measurement of mass flow and density. The fluid need not be electrically conductive

No moving parts, no wear, no maintenance

Ex design acc. to ATEX, IECEEx / cFMus [USA]

#### Transmitter with DSP technology

- The latest digital filter technology assures detection of even the weakest sensor signals

Simultaneous measurement of mass flow, volume flow, density, temperature and concentration

Type-tested acc. to NAMUR

#### Options

- Expanded density calibration with temperature compensation
- Pressure-resistant housing
- EHEDG-certified
- Concentration measurement

Fig. 2: FCM2000 overview

## 2 General information

The FCM2000 is ABB's economical and uncomplicated mass flowmeter, featuring the new DSP transmitter, either integrated in the flowmeter or mounted separately from it. The compact unit reduces installation and cabling expenditure. Flowrate information can be viewed directly at the meter site and the meter can be installed in systems in an even more space-saving manner than is currently possible.

The FCM2000 operates according to the Coriolis principle. The design offers the following benefits:

- Space-saving, rugged design.
- Wide flow measuring range; meter size "S" (DN 1.5 [1/16"]) to meter size "L" (DN 150 [6"]).
- Variety of process connection options.
- Two separate current outputs for measuring mass or volume flowrate, density, or temperature, as well as one pulse output.
- Contact inputs and outputs.
- HART protocol, PROFIBUS PA, FOUNDATION Fieldbus.
- Ex approval: The user can select the "i" or "e" type of protection for the output circuits; the type chosen will depend on the circuits which are connected. The type of protection can be changed after installation has been completed. The contact outputs can be configured as NAMUR outputs by the user.
- Permissible fluid temperature up to 200 °C (392 °F), CIP-enabled
- Illuminated, 2-line display with data entered using a magnet stick and without opening the housing.
- Certified acc. to EHEDG.

### Mass transmitter with digital signal processor (DSP)

The transmitter for the FCM2000 incorporates a digital signal processor (DSP) that enables high-precision mass flow and density measurements to be made. The Coriolis sensor signals are immediately converted into digital data without any intermediate analog steps.

Excellent long-term stability and reliability together with fast signal processing are achieved with the new DSP transmitter.

Self-diagnostic functions for the flowmeter sensor and the transmitter, in combination with absolute zero stability, are benefits you can count on to ensure accurate measurements are taken.

The FCM2000 transmitter is particularly well suited for use in the following cases:

- When mass flowrate is to be metered to the highest degree of accuracy.
- When the fluid density is to be determined.
- When the components of a recipe are to be mixed together.
- When metering non-conductive fluids or highly viscous, solid-loaded liquids, for example.
- In batch filling systems.

## 2.1 Installation Requirements

### 2.1.1 General information

#### Inspection

Before installing the flowmeter sensor, check for physical damage due to possible improper handling during shipment. All claims for damage are to be made promptly to the shipper.

#### Installation Requirements / System Sizing Information

The FCM2000 is suitable for both indoor and outdoor installations. The standard instrument meets the requirements of Protection Class IP 67. The primary is bidirectional and can be installed in any orientation. It is important to ensure that the meter pipes are always completely filled with fluid.

The corrosion resistance of the fluid wetted materials must be evaluated.

The following points are to be considered during installation:

The preferred flow direction is indicated by the arrow on the flowmeter sensor. Flow in this direction will be indicated as positive (a forward/reverse flow calibration is available as an option).

#### Installation position

The FCM2000 operates in any orientation. The optimal installation orientation is vertical with the flow upwards.

#### Supports

In order to support the weight of the flowmeter sensor and to ensure reliable measurements when adverse external effects exist (e.g., vibrations), the primary should be installed in rigid pipelines. Two supports or hangers should be installed symmetrically and stress free in close proximity to the in- and outlet process connections.

#### Shut Off Devices

To conduct a system zero adjustment, shut off devices are required in the pipeline:

- in horizontal installation at the outlet,
- in vertical installation at the inlet.

When possible, shut off devices should be installed both up- and downstream from the flowmeter sensor.

#### Inlet Straight Sections

The mass meter does not require any flow conditioning inlet straight sections. Care should be exercised to ensure that any valves, gates, sight glasses, etc., do not cavitate and are not set into vibration by the flowmeter sensor.

## System Design Information

- The presence of gas bubbles in the fluid can result in erroneous measurements, particularly in the density measurement. Therefore the flowmeter sensor should not be installed at the highest point in the system. Advantageous are installations in low pipeline sections, e. g., at the bottom of a U-section in the pipeline (invert).
- Long drop lines downstream from the flowmeter sensor should be avoided to prevent the meter tube from draining.
- Installation should be performed as stress free as possible.
- The flowmeter sensor should not come in contact with any other objects. Attachments to the housing are not permissible.
- When the cross-section of the connecting pipeline is larger than the flowmeter sensor size, suitable standard reducers should be installed.
- If strong vibrations exist in the pipeline, they should be damped using elastic pipeline elements. The damping devices must be installed beyond the supported flowmeter section and outside of the section between the shut off devices. The direct connection of flexible elements to the flowmeter sensor should be avoided.

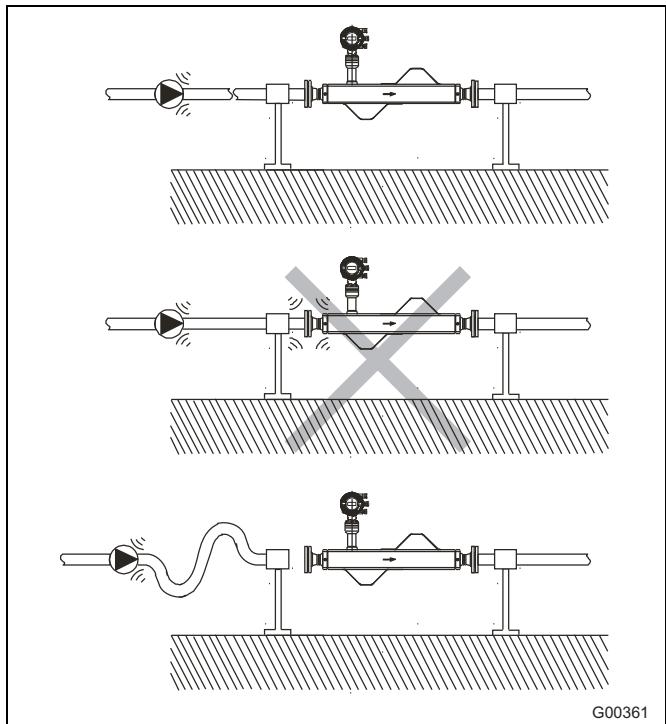

Fig. 3: Vibrations

- Care should be exercised to ensure that any dissolved gases, which may be present in many liquids, do not outgas. The back pressure at the outlet should be at least 0.2 bar (2.9 psi).
- Ensure that operation below the vapor pressure cannot occur when a vacuum exists in the meter tube.
- The flowmeter sensor should not be installed in the vicinity of strong electromagnetic fields, e. g., near motors, pumps, transformers etc.
- When operating more than one meter in one or multiple interconnected pipelines, the flowmeter primaries should be spaced distant from each other or the pipelines should be decoupled to prevent cross talk.
- Request information about special installation conditions for meter size "L".

## Zero balance

In order to adjust the zero under operating conditions, it must be possible to reduce the flowrate "ZERO" while the meter tube remains completely filled. A bypass line is optimal when the process cannot be shut down. It is important for accurate measurements that during the zero adjustment there are no gas bubbles in the flowmeter sensor. It is also important that the pressure and temperature in the meter tube be the same as those which exists during operation.

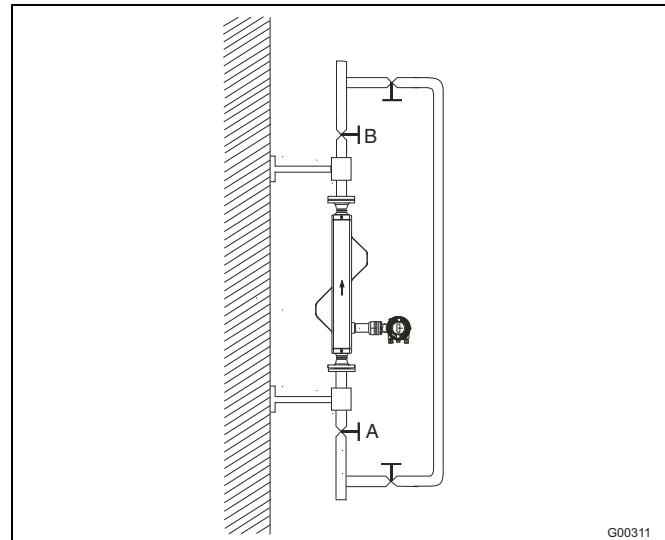

Fig. 4: Zero point adjustment with bypass line

## 2.1.2 Installation notes for FCM2000-MC2

### Vertical installation position

The optimal installation orientation is a vertical installation with an upward flow as shown in Fig. 5. This has the advantage that any solids contained in the fluid will settle downward and any gas bubbles will move upward out of the meter tube when the flowrate is zero. Additionally, it is easy to drain the meter tube. Deposits can thereby be avoided.

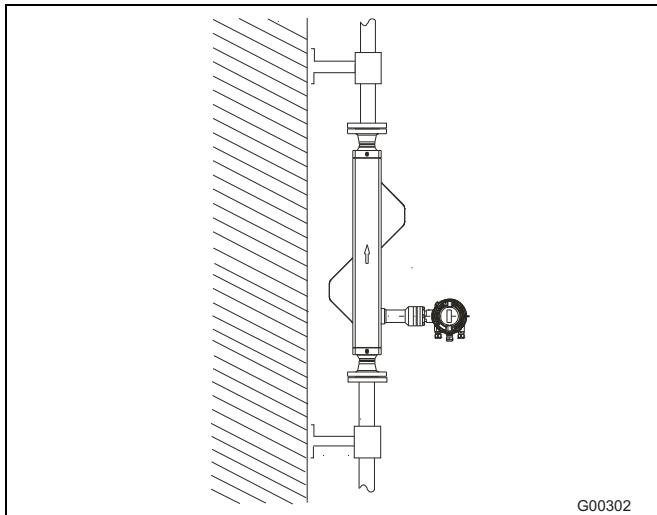

Fig. 5: Vertical installation position, self-draining (flow upwards)

### Horizontal Installation Orientations

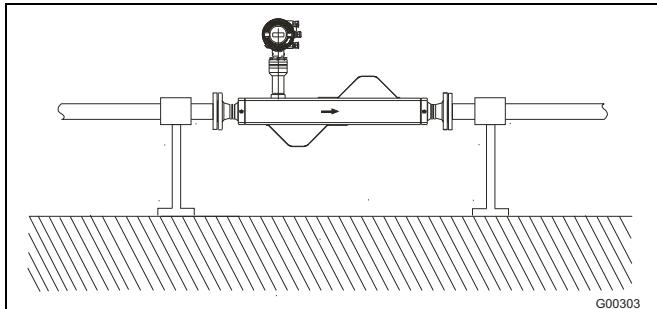

Fig. 6: Horizontal Installation Orientations

### Horizontal Installations, Self Draining

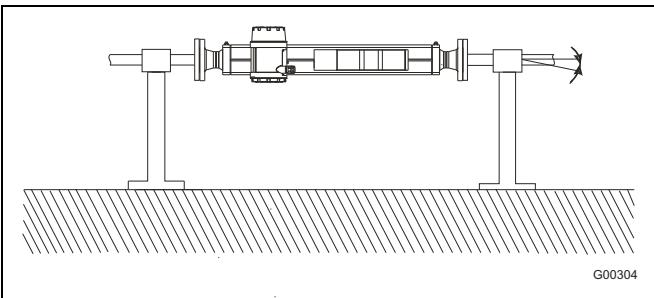

Fig. 7: Horizontal Installations, Self Draining,  $\alpha$  2 - 4°

### Installation in a Drop Line

The installation recommendation shown in Fig. 8 is only permissible if a pipeline reduction or orifice with a smaller cross-section can be installed to prevent the flowmeter sensor from partially draining during the measurements.

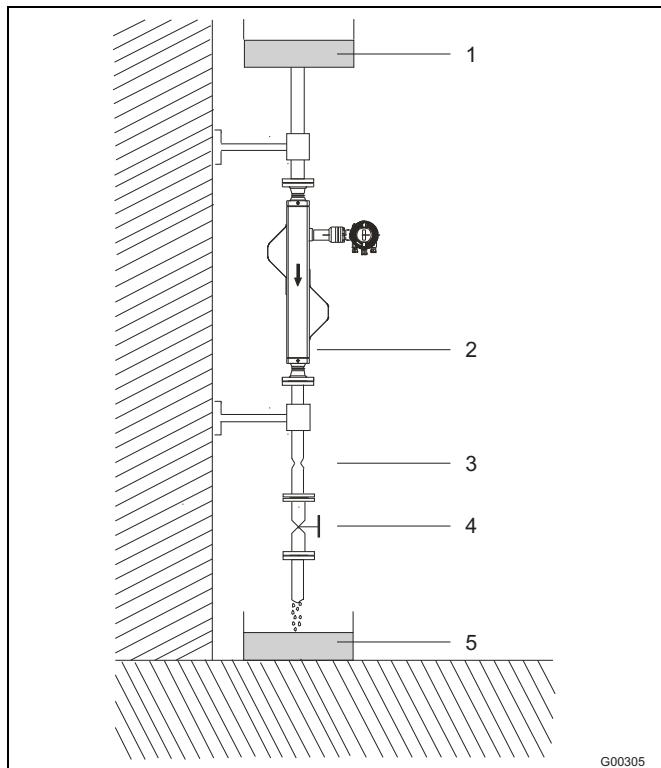

Fig. 8: Installation in a Drop Line

- 1 Supply reservoir
- 2 Flowmeter sensor
- 3 Orifice/pipe constriction
- 4 Valve
- 5 Product reservoir

### Difficult Installation Conditions

The accumulation of air or gas bubbles in the meter pipe can lead to increased inaccuracies. Fig. Fig. 9 shows critical installation conditions.

Installations at the highest point in the pipeline (Figure A) can result in the formation of air pockets which can lead to appreciable inaccuracies.

Another difficult installation condition is immediately upstream of a free discharge (Figure B) in a drop line.

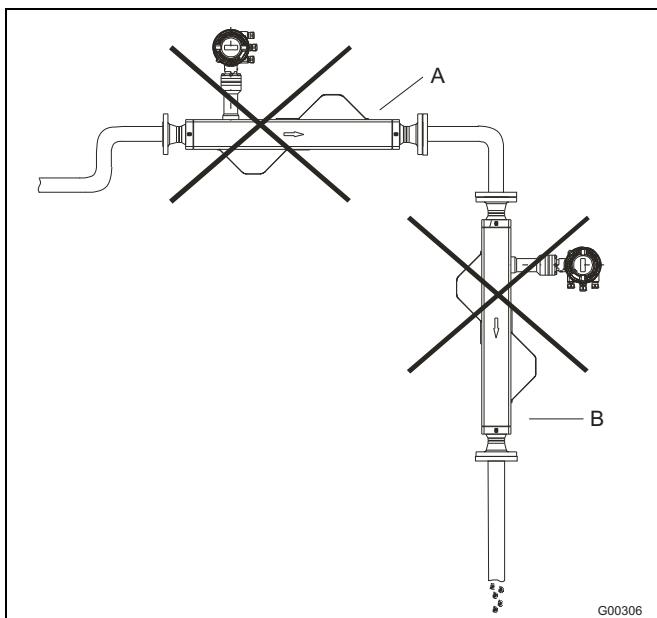

Fig. 9: Difficult Installation Conditions

#### Important:

Check whether the coordination flowmeter sensor and transmitter is correct. Compatible devices have the same end numbers, e. g., X001 and Y001 or X002 and Y002, on the type plate.

#### Pressure losses

The pressure losses, at the operating conditions, depends on the fluid and the actual flow. To calculate the pressure loss, the design program CD-CALC is provided.

### 2.1.3 Installation notes FCM2000-MS2

#### Installing the flowmeter sensor DN 1.5 (1/16")

Horizontal installation is recommended. If vertical installation is required, a flow direction from below to above is recommended for better elimination of air bubbles. In order for air to be removed from the flowmeter sensor, the flow speed in the flowmeter sensor must be at least 1 m/s. If the fluid contains solid particles, especially in conjunction with too little flow, a level installation location of the flowmeter sensor and positioning of the input flange completely on top is recommended so that the particles can be more easily flushed out. In order to avoid a partial emptying of the flowmeter sensor, a sufficient back pressure must be present at the unit (min. 0.1 ... 0.2 bar/(1.45...2.9 psi)).

- Install the flowmeter sensor in a vibration-free manner to a wall or a steel frame.
- Position the flowmeter sensor at a low location in the system in order to avoid a negative pressure in the flowmeter sensor, that could lead to air or gas separation in the fluid.
- Ensure that the flowmeter sensor is not run empty (in the normal operation) as this can lead to inaccurate measurements.

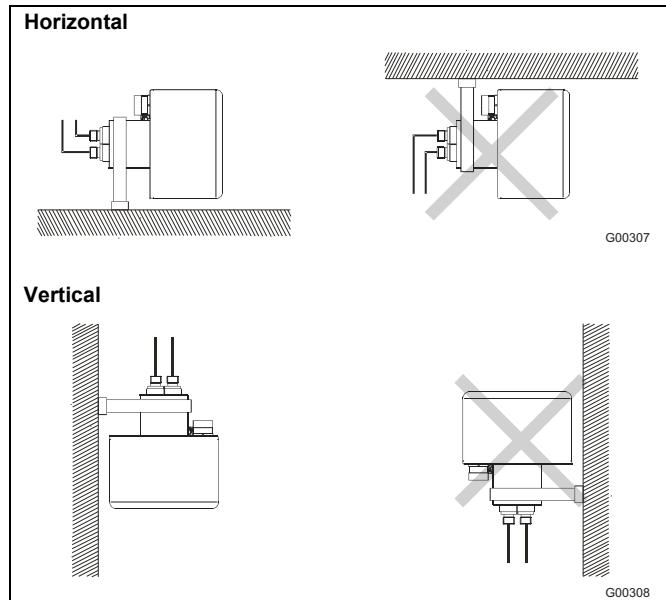

Fig. 10

### High temperature version

In the high temperature design the multi-connection plug is separated from the sensor housing by a pipe. Thereby the plug can still be accessed even when the sensor is insulated.

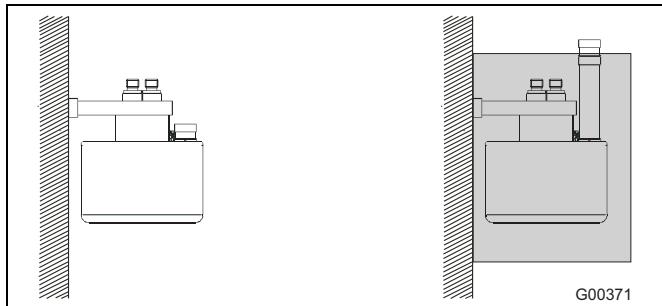

Fig. 11: Installation DN 1.5 (1/16") – vertical

#### Important

If there are large differences between the fluid and ambient temperature the sensor must be insulated, to prevent two phase flow and accuracy effects. This is especially important for low flowrates.

The sensor must **always** be completely filled with homogeneous liquid or a single phase gas, otherwise the accuracy could be adversely affected.

**For air/gas in volatile fluids horizontal installations are recommended.**

The mounting bracket included with the shipment should always be used. The bracket should be secured to a wall or a steel framework (vibration free and mechanically stable).

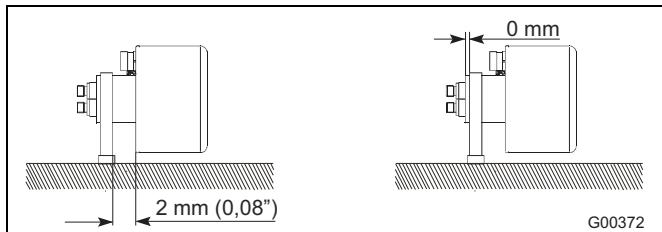

Fig. 12: Installation DN 1.5 (1/16") – horizontal

### Angle multi-connection plug, horizontal

To achieve optimum performance, the multi-connection plug is to be installed as shown in the figure. The multi-connection plug can be rotated within the angle noted.

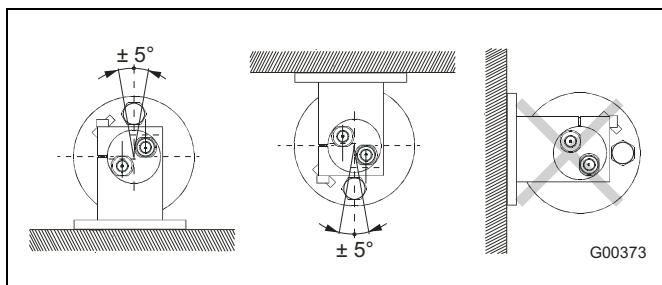

Fig. 13: Angle multi-connection plug – horizontal

### Angle multi-connection plug, vertical

A specific orientation of the connection box is not prescribed for vertical installations, although the rotation of the sensor may not exceed the value shown.

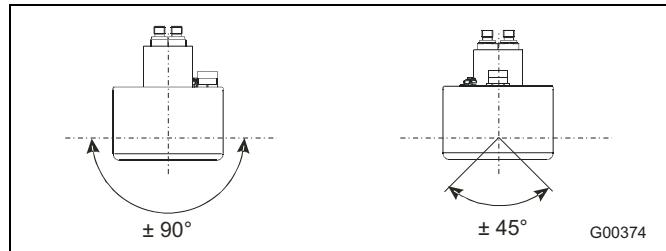

Fig. 14: Angle multi-connection plug – vertical

### Installing flowmeter sensor DN3/DN6 (1/10 / 1/4")

A horizontal installation position is recommended for light flow, since air bubbles are easier to remove in this position. If the liquid is volatile or contains solid particles, vertical installation is not recommended.

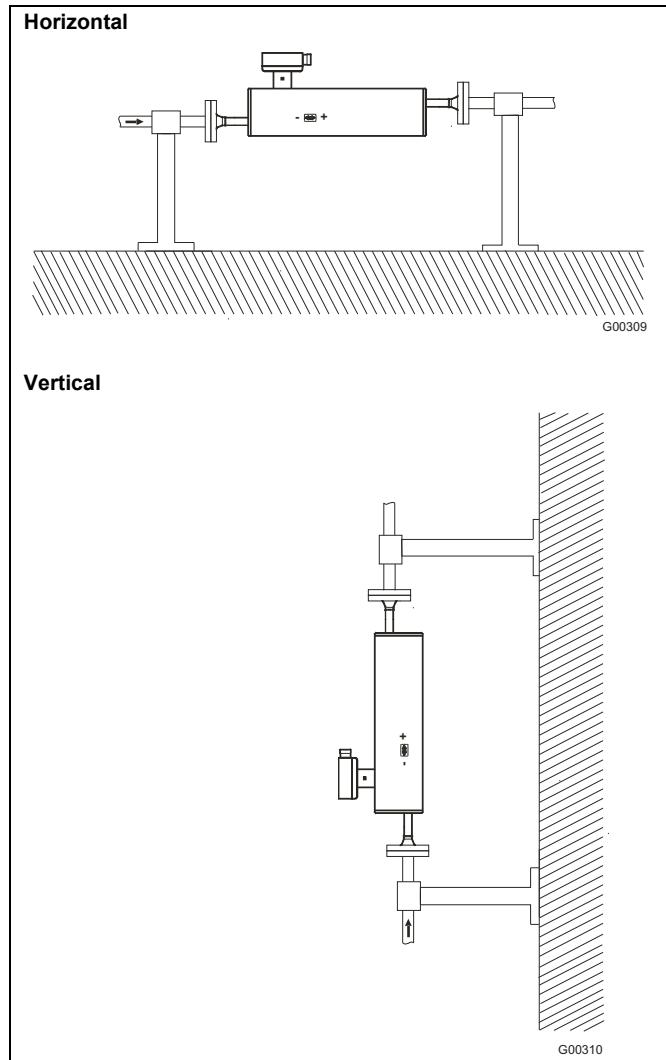

Fig. 15

### 3 Model FCM2000-MC2

#### 3.1 Specifications

Fig. 16: FCM2000-MC2 flowmeter sensor

##### Nominal sizes

"E" (DN 20); "F" (DN 25); "G" (DN 40); "H" (DN 50);  
"I" (DN 65); "J" (DN 80); "K" (DN 100); "L" (DN 150)

##### Measuring ranges for flowrate

Nominal size	Max. measuring range [Q <sub>max</sub> ] in [kg/min]
"E" DN 20 (3/4")	0 ... 100
"F" DN 25 (1")	0 ... 160
"G" DN 40 (1 1/2")	0 ... 475
"H" DN 50 (2")	0 ... 920
"I" DN 65 (2 1/2")	0 ... 1,890
"J" DN 80 (3")	0 ... 2,460
"K" DN 100 (4")	0 ... 4,160
"L" DN 150 (6")	0 ... 11,000

Protection class: IP 65/IP 67, NEMA 4X

##### Measured value deviation for flowrate DN 20 (3/4") to DN 65 (1.5")

(sizes "E", "F", "G", "H", "I")

± 0.4 % of flow rate + 0.02 % of Q<sub>max</sub>

± 0.25 % of flow rate + 0.02 % of Q<sub>max</sub>

± 0.15 % of flow rate + 0.01 % of Q<sub>max</sub>

± 0.1 % of flow rate + 0.01 % of Q<sub>max</sub> (not for size "E")

(deviation from rate + zero error)

##### Measured value deviation for flowrate DN 80 (3") and DN 100 (4")

(sizes "J", "K")

± 0.4 % of flow rate + 0.02 % of Q<sub>max</sub>

± 0.25 % of flow rate + 0.02 % of Q<sub>max</sub>

± 0.1 % of flow rate + 0.02 % of Q<sub>max</sub>

± 0.15 % v. M. + 0.02 % v. Q<sub>max</sub>

(deviation from rate + zero error)

##### Measured value deviation for flowrate DN 150 (6")

(size "L")

± 0.4 % of flow rate ± 0.05 % of Q<sub>max</sub>

± 0.25 % of flow rate ± 0.05 % of Q<sub>max</sub>

± 0.15 % of flow rate ± 0.05 % of Q<sub>max</sub>

± 0.1 % of flow rate ± 0.05 % of Q<sub>max</sub>

##### Operating temperature effect

Less than ± 0.006 % of Q<sub>max</sub>/1 K

##### Reproducibility of flowrate at rates > 5 % of Q<sub>max</sub>

0.10 % of flow rate for nom. deviation ± 0.1 %

0.15 % of flow rate for nom. deviation ± 0.25 % and 0.4 %

##### Measuring range for density

0.5 ... 3.5 kg/dm<sup>3</sup>

##### Measured value deviation for density

Standard calibration ± 5 g/l

Expanded density calibration ± 1 g/l

For separate designs, the signal cable is already calibrated and may not be either shortened or lengthened subsequently.

The transmitter is calibrated accordingly and may not be changed.

##### Reproducibility of density

± 0.1 g/l

##### Measured value deviation for temperature

-50 ... 200 °C (-58 ... 392 °F) < 1 °K (1.8 °F)

For the precise temperatures for units with Ex approval, refer to the "Ex relevant specifications" section.

If the ambient temperature is below -20 °C (-4 °F), additional flowrate, density, and temperature deviations are to be expected.

### 3.1.1 Reference conditions

#### Calibration fluid

Water 25 °C (77 °F) (+ 5 K/- 5 K)

Pressure 0.5 ... 6 bar (7.3 ... 87.0 psi)

#### Ambient temperature

25 °C (77 °F) (+ 10 K/- 5 K)

#### Supply power

Line voltage as per name plate  $U_N \pm 1\%$

#### Warm-up phase

30 minutes

#### Installation according to this specification

No visible gas phase,

no external mechanical or hydraulic disturbances,  
particularly cavitation

#### Output calibration

Pulse output

#### Effect of the analog output on the measurement accuracy

Similar to pulse output  $\pm 0.1\%$  of measured value

### 3.1.2 Materials and additional specifications

#### Flowmeter sensor materials

Parts in contact with fluid

Stainless steel 1.4571/1.4308 (316Ti/CF8)

Stainless steel 1.4435/316L

Hastelloy C-4/2.4610

With flowmeter sensor material 1.4435 cert. acc. to EHEDG

Option: Manufactured acc. to NACE MR0175 (ISO 15156)

Housing

Stainless steel 1.4301/1.4308 (304/CF8)

#### Transmitter materials

Housing

Alloy casting, varnished

Mid-section: RAL 7012

Cover: RAL 9002

Paint coat: 80 ... 120 µm thickness

#### Fluid temperature

Standard: -50 ... 200 °C (-58 ... 392 °F)

The relevant ambient temperatures for use in a potentially explosive area can be found in the corresponding chapter.

#### Ambient temperature

-20 ... 60 °C (-4 ... 140 °F); opt. -40 ... 60 °C (-40 ... 140 °F)

The relevant ambient temperatures for use in a potentially explosive area can be found in the corresponding chapter.

#### Process connections

Flange DIN/ASME

Tri-clamp DIN 32676 (ISO 2852)

- DN 15 ... DN 50 (1/2 ... 2"): series 3

- DN 65 ... DN 100 (2 1/2 ... 4"): series 1

Threaded pipe connection conforming to DIN 11851

The max. permissible operating pressure is determined by the respective process connection, the fluid temperature, the screws, and the gasket material.

#### Pressure rating

PN 16, PN 40, PN 100 (up to DN 80 [3"])

CI 150, CI 300, CI 600 (up to DN 80 [3"])

#### Housing as protective device (optional)

Max. 40 bar (580 psi)

#### Pressure Equipment Directive 97/23/EC

Conformity assessment in accordance with Category III, fluid group 1, gas

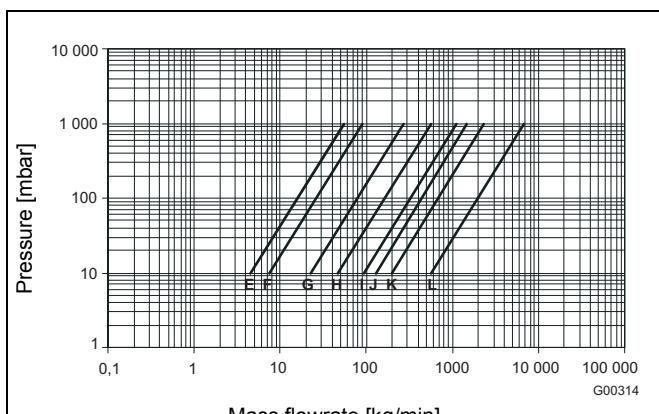

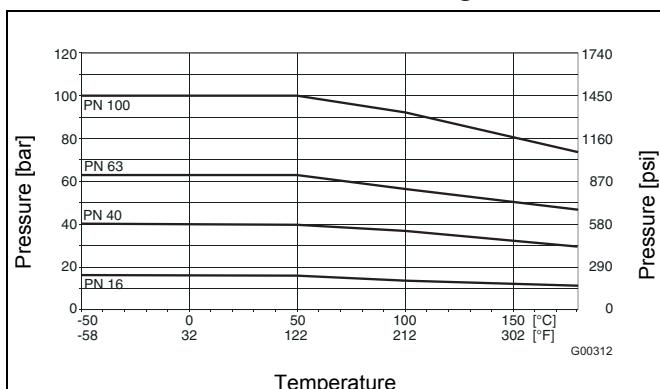

Take into consideration the corrosion resistance of the meter tube materials as regards the measuring fluid.

#### EHEDG-approved unit versions

The appropriate installation conditions must be observed in order to achieve an installation that complies with hygiene requirements. The process connection/gasket combination created by the operator is particularly important too. Therefore, to ensure that the installation complies with hygiene requirements, only parts that conform to EHEDG stipulations (EHEDG Position Paper "Hygienic Process connections to use with hygienic components and equipment") may be used.

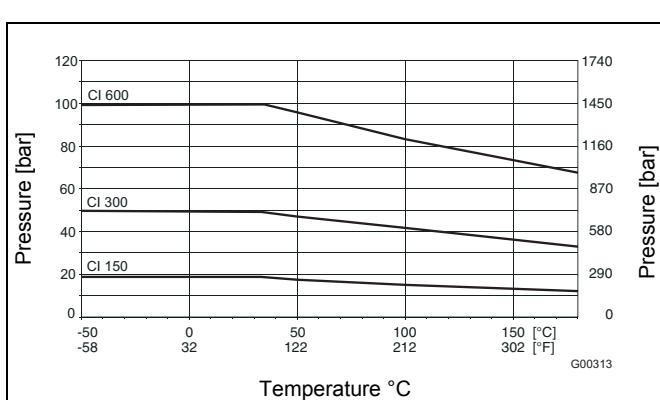

**Material load for process connections**

Process connection	Nominal size DN	PS <sub>max</sub> [bar]	TS <sub>max</sub> [°C]	TS <sub>min</sub> [°C]
Threaded pipe connection conforming to DIN 11851	15 ... 40 (1/2 ... 1 1/2")	40	140	-40
	50 ... 100 (2 ... 4")	25	140	-40
Tri-Clamp conforming to DIN 32676	15 ... 50 (1/2 ... 2")	16	120	-40
	65 ... 100 (2 1/2 ... 4")	10	120	-40

**3.1.3 Material load curves for flanged units****Viscosity range**

Max. dyn. viscosity: ≤ 1 Pas (= 1,000 mPas = 1,000 cP)

At higher viscosities, please contact our ABB representatives.

### 3.2 Dimensions

#### 3.2.1 Design MC21

## 4 Model FCM2000-MS2

### 4.1 Specifications

Fig. 32: FCM2000-MS2 flowmeter sensor

#### Nominal sizes

"S" (DN 1.5); "T" (DN 3); "U" (DN 6)

#### Measuring ranges for flowrate

Nominal size	Max. measuring range [Q <sub>max</sub> ] in [kg/h]
"S" DN 1.5 (1/16")	0 ... 65
"T" DN 3 (1/10")	0 ... 250
"U" DN 6 (1/4")	0 ... 1000

Protection class: IP 65

#### Measured value deviation for flowrate

± 0.4 % of flow rate ± 0.02 % of Q<sub>max</sub>

± 0.25 % of flow rate ± 0.02 % of Q<sub>max</sub>

± 0.15 % of flow rate ± 0.01 % of Q<sub>max</sub>

(deviation from rate + zero error)

#### Reproducibility of flowrate

0.1 % of flow rate for nom. deviation ± 0.15 %

0.15 % of flow rate for nom. deviation ± 0.25 % and 0.4 %

#### Measuring range for density

0.5 ... 3.5 kg/dm<sup>3</sup>

#### Measured value deviation for density

Standard calibration ± 10 g/l

Temperature range 0 ... 100 °C (32 ... 212 °F)

Expanded density calibration available upon request

#### Measured value deviation for temperature

-50 ... 180 °C (-58 ... 356 °F) < 1 °K (1.8 °F)

#### Reference conditions

##### Calibration fluid

Water 25 °C (77 °F) (+ 5 K/- 5 K)

Pressure 0.5 ... 6 bar (7.3 ... 87.0 psi)

#### Ambient temperature

25 °C (77 °F) (+ 10 K/- 5 K)

#### Supply power

Line voltage as per name plate U<sub>N</sub> ± 1 %

#### Warm-up phase

30 minutes

#### Installation according to this specification

No visible gas phase

No external mechanical or hydraulic disturbances, particularly cavitation

#### Output calibration

Pulse output

#### Effect of the analog output on the measurement accuracy

Similar to pulse output ± 0.1 % of measured value

#### Materials and additional specifications

##### Sensor materials

Parts in contact with fluid

1.4435/316L

Housing 1.4404

##### Fluid temperature

Standard:

-50 ... 180 °C (-58 ... 356 °F): DN 3 (1/10"), DN 6 (1/4")

-50 ... 125 °C (-58 ... 257 °F): DN 1.5 (1/16")

-50 ... 180 °C (-58 ... 356 °F): DN 1.5 (1/16") (optional)

For information about the design for operation in potentially explosive areas, refer to the corresponding chapter.

##### Ambient temperature

-20 ... 50 °C (-4 ... 122 °F)

For information about the design for operation in potentially explosive areas, refer to the corresponding chapter.

##### Process connections

G1/4" ISO 228-1

1/4" NPT ASME B1.201

Flange DIN/ASME for DN 6 (1/4")

Threaded pipe connection conforming to DIN 11851 for DN 6 (1/4")

Tri-Clamp conforming to DIN 32676 (ISO 2852) for DN 6 (1/4")

The max. permissible operating pressure is determined by the respective process connection, the fluid temperature, the screws, and the gasket material.

##### Pressure rating

Flange PN 40, PN 100, Cl 150, Cl 600

Thread G 1/4", 1/4" NPT, PN 100 ... PN 410 (for each option)

##### Installation

For more detailed instructions regarding installation, refer to the operating instructions.

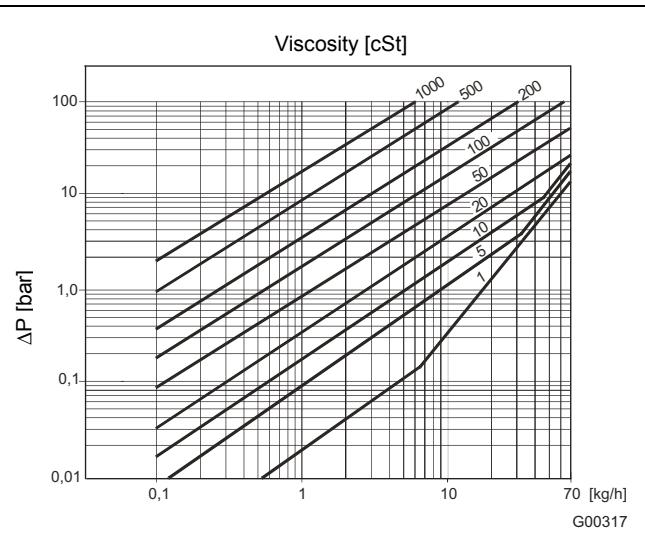

**Pressure loss curves**

Fig. 33: Pressure losses MS21, DN 1.5 (1/16")

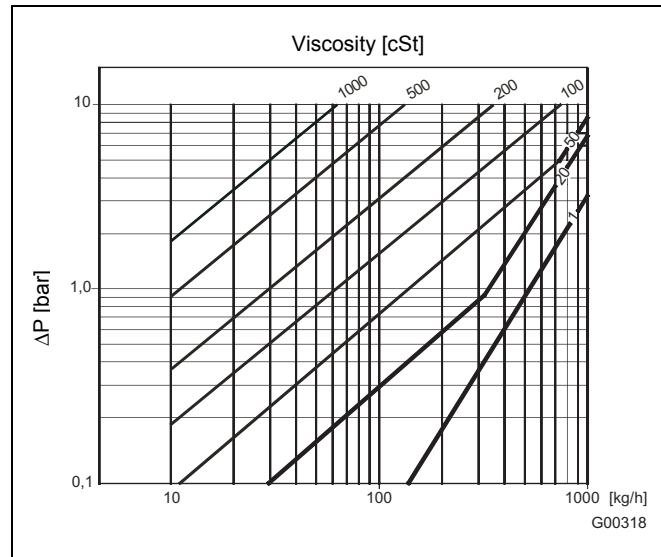

Fig. 35: Pressure losses MS21, DN 6 (1/4")

## 5 Transmitter

### 5.1 Specifications

Fig. 38: FCM2000-ME2 transmitter, field-mount housing

#### Measuring range

Freely configurable between 0.01  $Q_{\max}$  and 1  $Q_{\max}$

#### Ingress protection

IP 65/IP 67, NEMA 4X

#### Electrical connections

Cable gland M20 x 1.5 or 1/2" NPT

Max. signal cable length for remote mount design 50 m (longer lengths available upon request)

#### Supply power

##### Supply voltage

100 ... 230 V AC (tolerance -15 % and +10 %), 47 ... 63 Hz

20.4 ... 26.4 V AC, 47 ... 63 Hz

20.4 ... 31.2 V DC

Ripple: ≤ 5 %

#### Power consumption

S ≤ 25 VA

#### Response time

As jump function 0 ... 99 % (corr. to 5  $\tau$ ) ≥ 1 s

#### Ambient temperature

-20 ... 60 °C (-4 ... 140 °F), optional -40 ... 60 °C (-40 ... 140 °F)

At operation below -20 °C (-4 °F), the display can no longer be read and the electronic unit should be operated with as few vibrations as possible. Complete operational reliability is achieved at temperatures above -20 °C (-4 °F).

#### Design

Field-mount housing and compact transmitter unit as alloy casting, varnished

Mid-section: RAL 7012, dark gray

Cover: RAL 9002, light gray

Paint coat: 80 ... 120 µm thick

#### Forward/reverse flow metering

Signals are shown on the display by direction arrows and by the optocoupler for ext. signaling.

#### Display

The graphic display has 2 lines and features an LED backlight. Both lines are freely configurable to display the mass flowrate, volume flowrate, density, or temperature. Flow count, 7-digit with overflow counter and physical unit for mass or volume.

When the four mounting screws are loosened, the display can be installed in 4 positions. This ensures optimal readability.

Fig. 39: Magnet stick operation

- 1 Magnet stick (The magnet stick can be used for parameterization in the compact unit or the field-mount housing when the housing cover is closed.)

#### Parameter adjustment

Data can also be entered in various languages using the three control buttons on the transmitter.

The transmitter housing can be rotated approx. 180° in each direction. The display can be installed in 4 positions to ensure optimal readability. As well as allowing you to select the 1st and 2nd display lines, multiplex mode can be used to display the following: flow indicators in %, physical unit, or bar graph; totalizer status; forward or reverse flow; and TAG no.

#### Data backup

Via FRAM, all data over 10 years old is stored without supply power in the event of shut-off or failure of the line voltage. Additional security is provided by another FRAM in the transmitter, through data exchange or data storage for process information.

Hardware and software identification acc. to NAMUR recommendation NE53.

#### Important

The unit complies with NAMUR recommendations NE21 and NE43, "Electromagnetic compatibility of equipment for process and lab control technology", as well as EMC Directive 2004/108/EC (EN 61326) and Low-Voltage Directive 2006/95/EC (EN 61010-1).

## 5.2 Concentration measurement DensiMass

This software calculates on the basis of predefined density-temperature-concentration matrices the present concentration of a 2 phase liquid. In this software the following matrices are predefined:

- Concentration of sodium hydroxyde in water
- Concentration of alcohol in water
- Concentration of sugar (BRIX)
- Concentration of Corn Starch
- Concentration of Wheat starch

The user can additionally enter up to 2 variable matrices with up to 100 values for concentration computation.

### Calculation of accuracy

The accuracy of the concentration computation depends foremost on the quality of the matrix data. As density and temperature measurement is the input for the calculation both accuracies define the accuracy of the concentration measurement.

Example:

Density 0 % alcohol in water (20 °C [68 °F]) 998.23 g/l

Density 100 % alcohol in water (20 °C [68 °F]) 789.30 g/l

100 % = 208.93 g/l

0.48 % = 1 g/l

2.40 % = 5 g/l

The chosen accuracy class of the density measurement effects the accuracy of the concentration measurement directly.

Please also see the manual D184B111Uxx attached to your meter and also available at [www.abb.com/flow](http://www.abb.com/flow).

## 5.3 Inputs/outputs

### Active current output (0/4 ... 20 mA)

Current output 1

0/4 ... 20 mA, selectable

Load:  $0 \Omega \leq R_B \leq 560 \Omega$

Terminals: 31/32

Measurement uncertainty < 0.1 % of rate

For output of mass flowrate, volume flowrate, density, and temperature.

Freely configurable in the software.

### Passive current output (4 ... 20 mA)

Current output 1 or 2

Output current 4 ... 20 mA

Load:  $0 \Omega \leq R_B \leq 600 \Omega$

Source voltage:  $12 \text{ V} \leq U_q \leq 30 \text{ V}$

Terminals: 33/34

Measurement uncertainty < 0.1 % of rate

For output of mass flowrate, volume flowrate, density, and temperature.

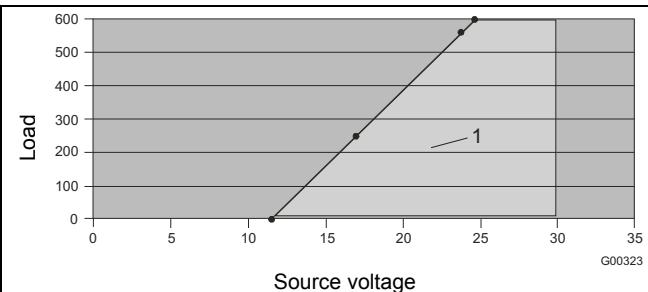

Fig. 40: Permissible source voltage as a function of the load resistance, where  $I_{\max} = 22 \text{ mA}$

1 Permissible range

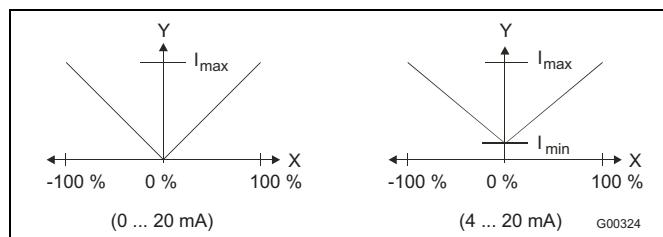

Fig. 41

### Important

Failure information acc. to NAMUR recommendation NE43.

**Scaled pulse output**

Scaled pulse output (max. 5 kHz) with adjustable pulse factor between 0.001 ... 1,000 pulses per selected engineering unit. The pulse width is configurable from 0.1 ... 2,000 ms. The output is electrically isolated from current outputs 1 and 2.

<b>Design</b>	<b>Passive</b>	<b>Active</b>
Terminals	51, 52	51, 52
Operating voltage	$16 \text{ V} \leq U_{CEH} \leq 30 \text{ V DC}$	$16 \text{ V} \leq U \leq 30 \text{ V DC}$
Operating current	$0 \text{ V} \leq U_{CEL} \leq 2 \text{ V}$ $0 \text{ mA} \leq I_{CEH} \leq 0.2 \text{ mA}$ $2 \text{ mA} \leq I_{CEL} \leq 220 \text{ mA}$	
	When using a mechanical totalizer, pulse widths $\geq 30 \text{ ms}$ and $f_{\text{max}} \leq 3 \text{ Hz}$ are recommended	
$f_{\text{max}}$	5 kHz	5 kHz
Pulse width	0.1 ms ... 2,000 ms	0.1 ms ... 2,000 ms

**Contact output**

The following functions can be assigned in the software:

System monitoring: normally open or normally closed contact

Forward/reverse flow indication: closed for forward flow

Max/min alarm: normally open or normally closed contact

Terminals: 41, 42

"Closed"     $0 \text{ V} \leq U_{CEL} \leq 2 \text{ V}$

$2 \text{ mA} \leq I_{CEL} \leq 220 \text{ mA}$

"Open"

$16 \text{ V} \leq U_{CEH} \leq 30 \text{ V}$

$0 \text{ mA} \leq I_{CEH} \leq 0.2 \text{ mA}$

**Contact input**

The following functions can be assigned in the software:

Ext. output switch-off. When the meter tube empties, all output signals can be turned off.

Ext. totalizer reset. The internal totalizers can be reset from an external contact.

Terminals: 81/82

"On"         $16 \text{ V} \leq U_{KL} \leq 30 \text{ V}$

"Off"         $0 \text{ V} \leq U_{KL} \leq 2 \text{ V}$

Internal resistance:  $R_i = 2 \text{ k}\Omega$

All inputs/outputs are electrically isolated from one another.

## 5.4 Digital Communication

The transmitter offers the following options for digital communication:

### 5.4.1 HART protocol

The unit is registered with the HART Communication Foundation.

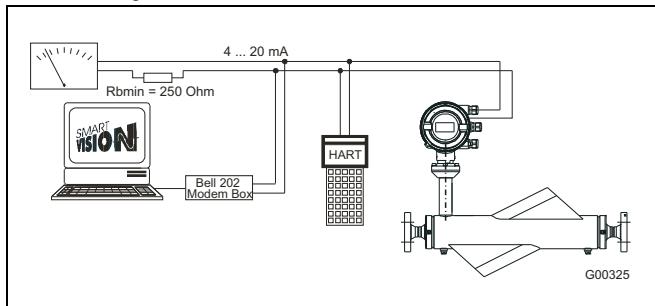

Fig. 42: Communication via HART protocol

<b>HART protocol</b>	
Configuration	Directly on the unit Software DSV401 (+ HART-DTM)
Transmission	FSK modulation on current output 4 ... 20 mA acc. to Bell 202 standard
Max. signal amplitude	1.2 mA <sub>ss</sub>
Load of current output	Min. 250 Ω, max. = 560 Ω (ignition-proof: max. 300 Ω)
<b>Cable</b>	
Cable	AWG 24 twisted
Max. cable length	1,500 m (4,921 ft.)
Baud rate	1,200 baud
Display	Log. 1: 1,200 Hz Log. 0: 2,200 Hz

For additional information, see the separate interface description.

### System integration

Communication (configuration, parameterization) can be performed with the DTM (Device Type Manager) available for the unit (software version B.10 and higher) and the corresponding framework applications as per FDT 0.98 or 1.2 (DSV401 R2). If you require integration into different tools/systems (e.g., AMS or Siemens S7), this is available upon request. DSV401 communication tool for HART, free 90-day test version also available upon request. DTMs are included in DSV401.

### 5.4.2 PROFIBUS PA protocol

The interface conforms to Profile 3.0 (PROFIBUS standard, EN 50170, DIN 19245 [PRO91]).

PROFIBUS PA ID no.:	0849 hex.
Alternative standard ID no.:	9700 or 9742 hex.
Configuration	Directly on the unit Software DSV401 (+ PROFIBUS PA DTM)
Transmission signal	Acc. to IEC 61158-2
Cable	Shielded, twisted cable (acc. to IEC 61158-2, types A or B are preferred)

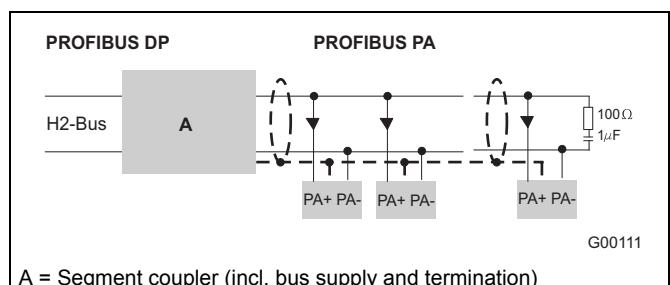

Fig. 43: Example for PROFIBUS PA interface connection

### Bus topology

- Tree and/or line structure
- Bus termination: passive at both ends of the main bus line (RC element R = 100 Ω, C = 1 μF)

### Voltage/Current consumption

- Average current consumption: 14 mA.
- In the event of an error, the FDE (= Fault Disconnection Electronic) function integrated in the unit ensures that the current consumption can rise to a maximum of 26 mA.
- The upper current limit is restricted electronically.
- The voltage on the bus line must lie in the range of 9 ... 32 V DC.

For additional information, see the separate interface description.

#### Important

For PROFIBUS PA / FOUNDATION Fieldbus, FISCO/FNICO, the maximum number of units which can be connected must be restricted.

### 5.4.3 FOUNDATION Fieldbus (FF)

FF interface	Compliant with FF standard 890/891 and FF-902
Interoperability test campaign no.	IT 027200
Manufacturer ID	0x000320
Device ID	0x0018
Configuration	<ul style="list-style-type: none"> <li>• Directly on the unit</li> <li>• Via services integrated in the system</li> <li>• National configurator</li> </ul>
Transmission signal	Acc. to IEC 61158-2

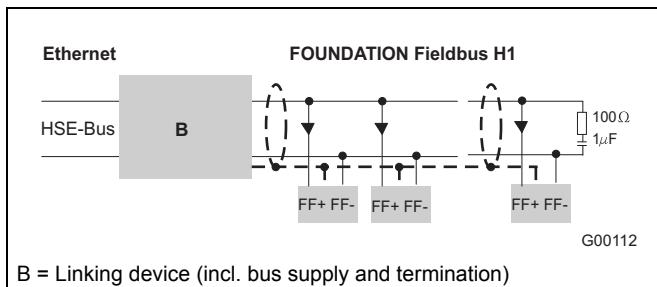

Fig. 44: Example for FOUNDATION Fieldbus interface connection

#### Bus topology

- Tree and/or line structure
- Bus termination: passive at both ends of the main bus line (RC element  $R = 100 \Omega$ ,  $C = 1 \mu\text{F}$ )

#### Voltage/Current consumption

- Average current consumption: 14 mA.
- In the event of an error, the FDE (= Fault Disconnection Electronic) function integrated in the unit ensures that the current consumption can rise to a maximum of 26 mA.
- Upper current limit: electronically restricted.
- The voltage on the bus line must lie in the range of 9 ... 32 V DC.

#### Bus address

The bus address is automatically assigned or can be set in the system manually.

Addresses are detected using a unique combination of manufacturer ID, device ID, and device serial number.

#### System integration

The following are required:

- DD (Device Description) file, which includes the device description.
- The CFF (Common File Format) file is required for engineering the segment. Engineering can be performed online or offline.

You can find both files, as well as the interface description, on the supplied CD (part no.: D184B093U35). This can be re-ordered, if necessary, from ABB at no cost.

The files needed for operation can also be downloaded from [www.abb.com/flow](http://www.abb.com/flow) --> Coriolis Mass --> fieldbus.org.

#### Important

For PROFIBUS PA / FOUNDATION Fieldbus, FISCO/FNICO, the maximum number of units which can be connected must be restricted.

## 5.5 Electrical connections

### 5.5.1 Interconnection Examples for Peripherals

#### DC outputs (incl. HART)

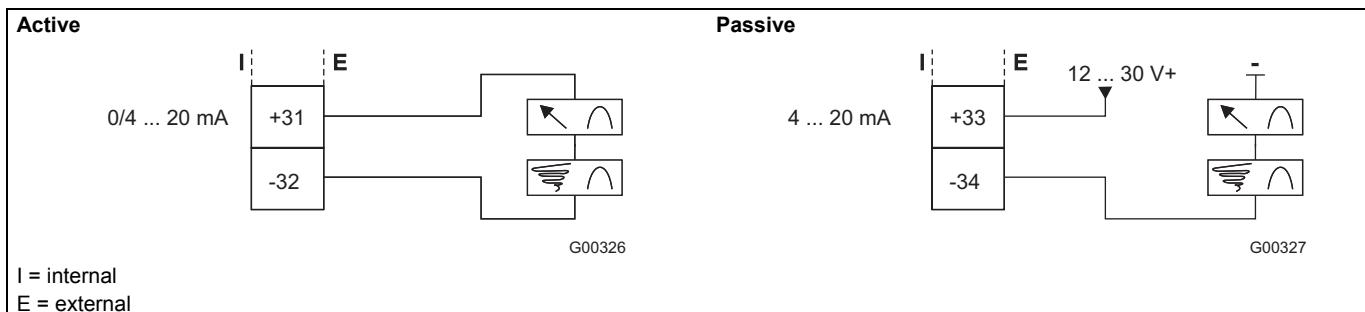

Fig. 45: Current output 1 active/passive

#### Switch output

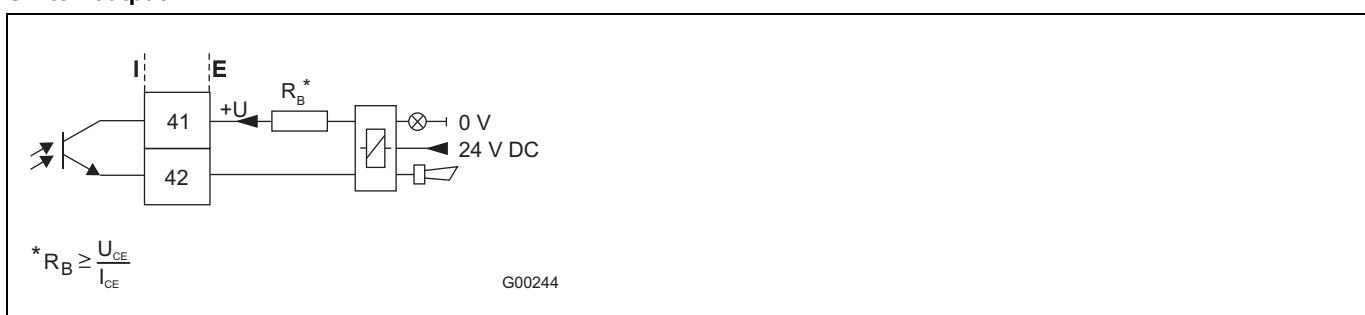

Fig. 46: Switch output for system monitoring, Max.-Min. alarm for empty tube or forward/reverse signal

#### Switch input

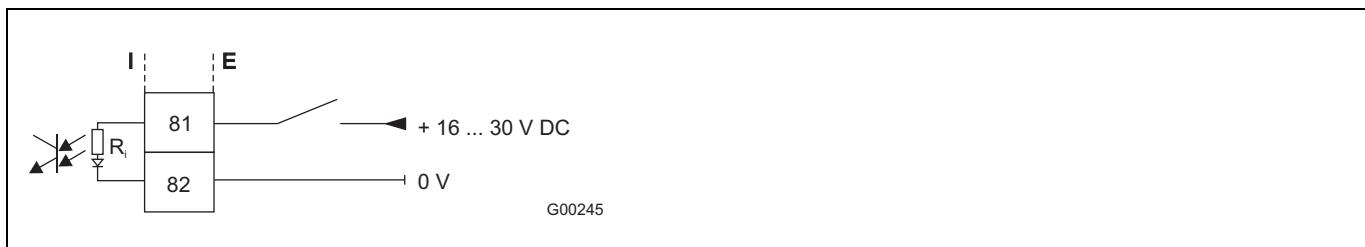

Fig. 47: Contact input for external totalizer reset and external zero return

#### Pulse Output

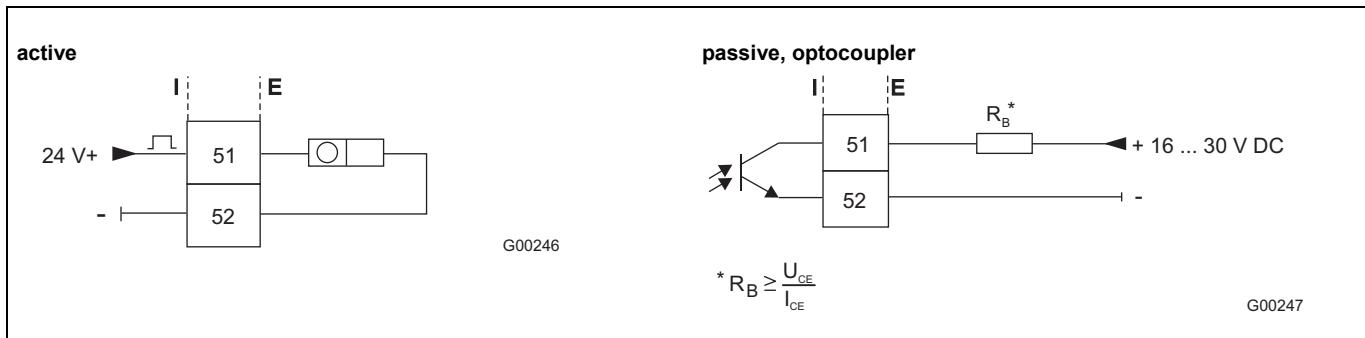

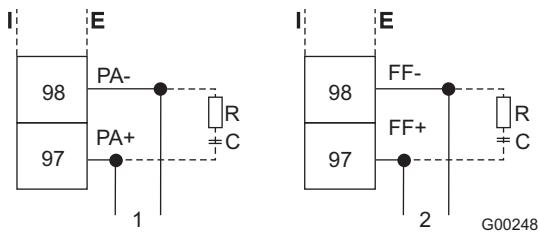

Fig. 48: Pulse output active and pulse output passive, optocoupler

**PROFIBUS PA / FOUNDATION Fieldbus**

The resistance R and condenser C form the bus termination. They must be installed when the device is connected to the end of the entire bus cable.

R = 100 Ω; C = 1 µF

1 PROFIBUS PA

2 FOUNDATION Fieldbus

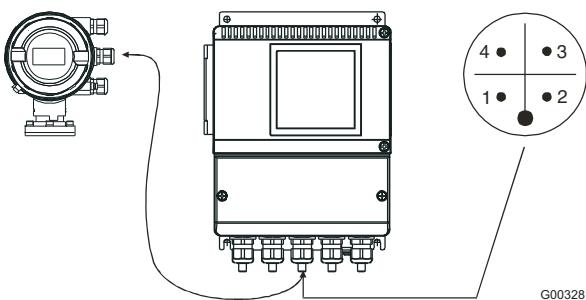

I = Internal

E = external

Fig. 49: Connection examples for peripherals with PROFIBUS PA or FOUNDATION Fieldbus

**Connection via M12 plug (for PROFIBUS PA only)**

As an option, the bus can also be connected via an M12 plug instead of the cable gland (see order information for device). The device can be shipped completely prewired. For information about suitable connectors (type EPG300) and other accessories, refer to the data sheet 10/63.6.44.

**Pin assignment**

(Front view showing pin insert and pins)

PIN 1 = PA+

PIN 2 = nc

PIN 3 = PA-

PIN 4 = shield

Fig. 50: Connection example via M12 plug

### 5.5.2 Electrical connections between the transmitter and the flowmeter sensor

Connecting transmitter ME21 to flowmeter sensor MC21

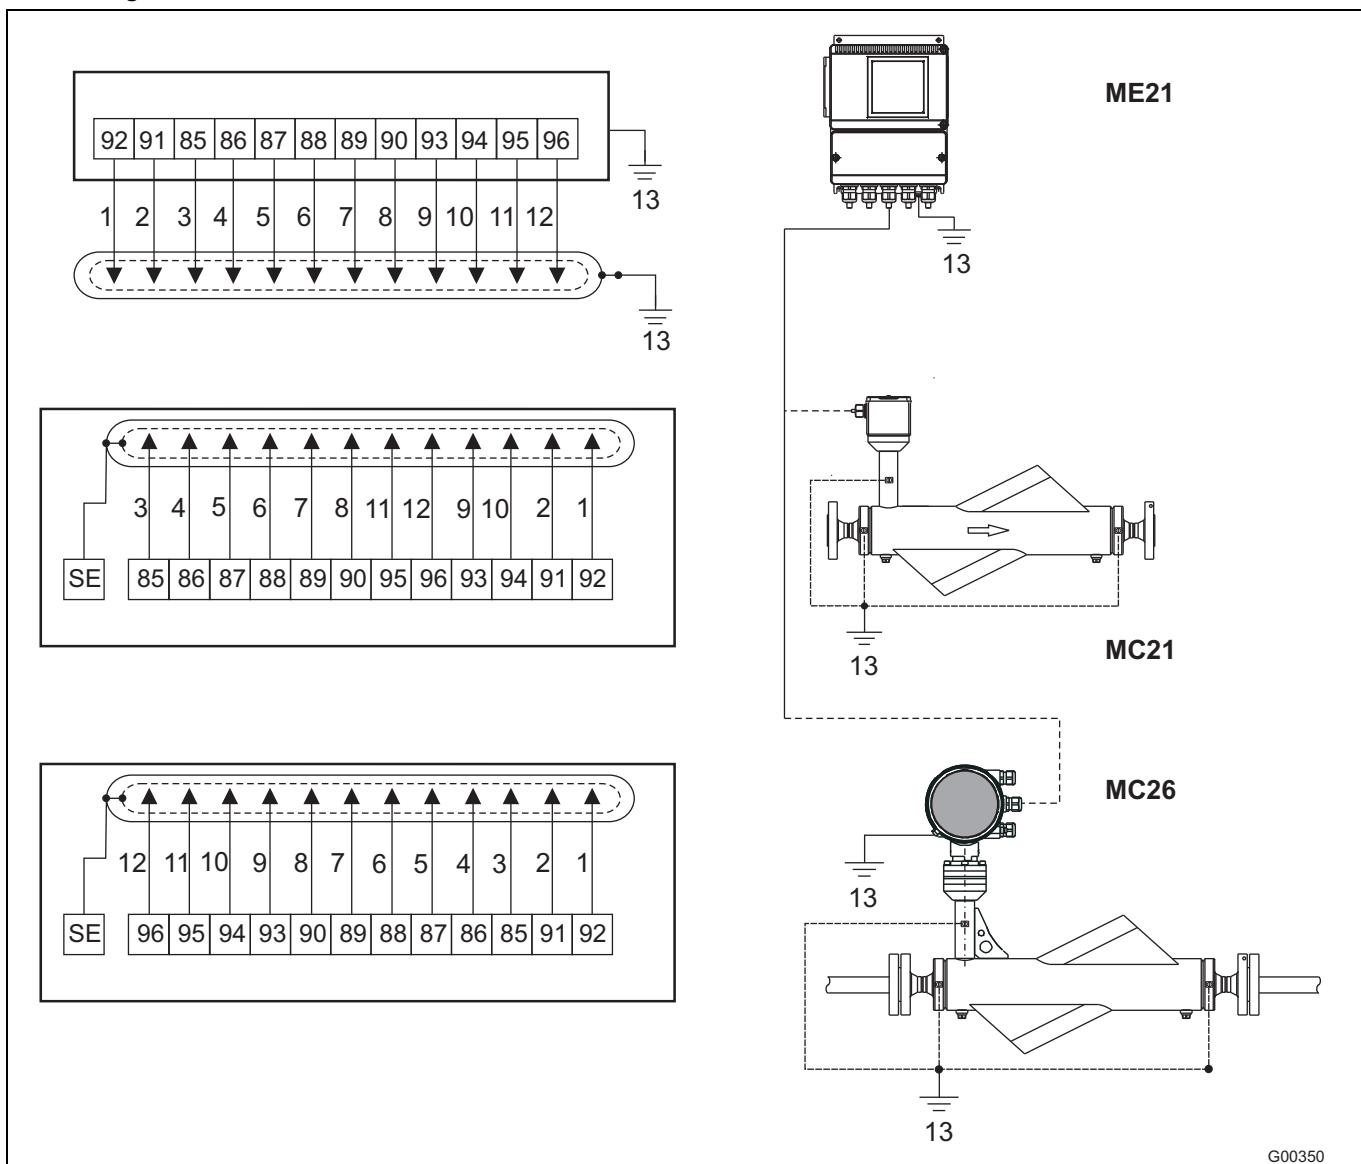

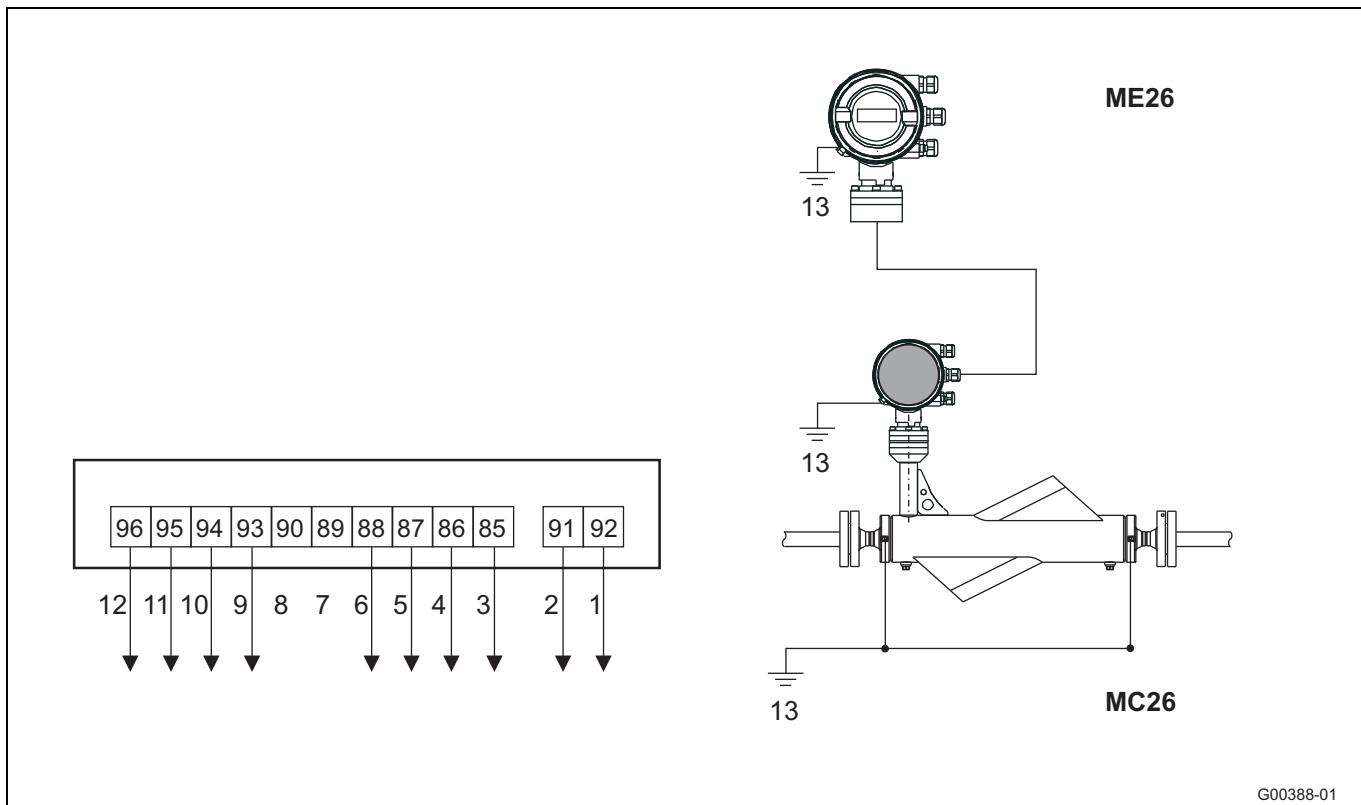

Fig. 51

91 / 92	Driver
93 / 94 / 95 / 96	Temperature
85 / 86	Sensor 1
87 / 88	Sensor 2

| 6 Violet   |
| 7 White  |
| 8 Black  |
| 9 Orange   |
| 10 Yellow  |
| 11 "PA" equipotential bonding. When connecting transmitter to flowmeter sensor MS26, transmitter also has to be connected to "PA". |

### 5.5.3 Electrical connections between the transmitter and the peripherals

#### Input and output signals, supply power ME2/MC2

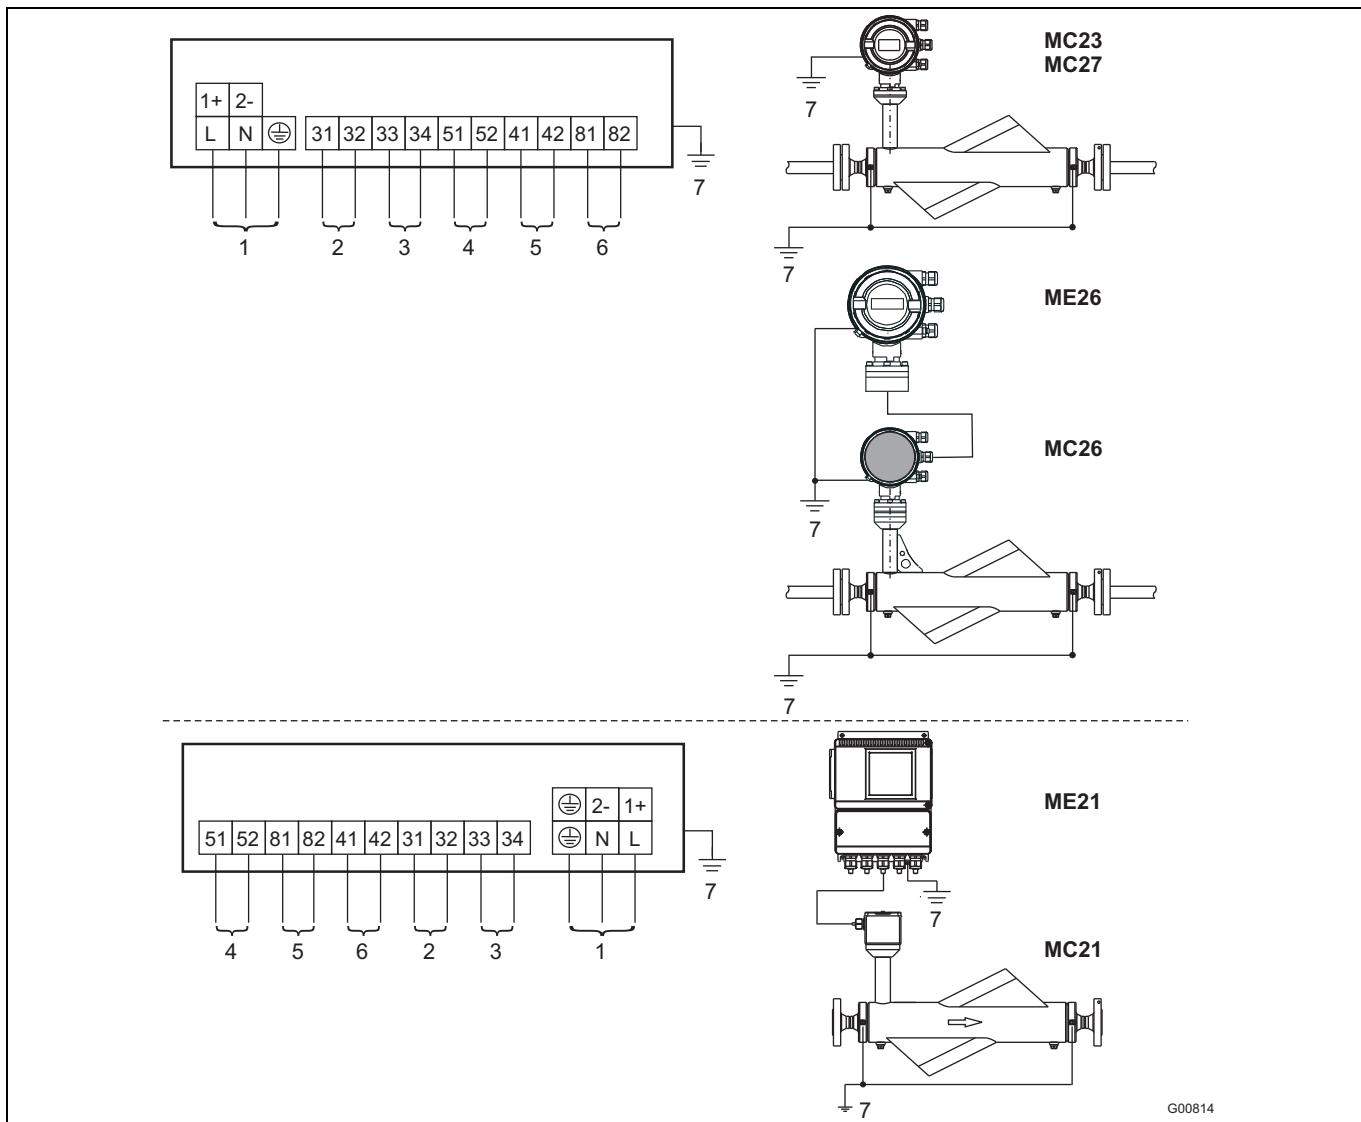

Fig. 54

- Supply power  
Line voltage:  $U_{AC}$  100 ... 230 V AC, frequency 50/60 Hz, terminals L, N,  $\ominus$   
Low voltage:  $U_{DC}$  24 V, frequency 50/60 Hz, terminals 1+, 2-,  $U_{DC}$  24 V
- Current output 1: can be selected via software  
2a: function: active  
Terminals: 31, 32; 0/4 ... 20 mA ( $0 \Omega \leq R_B \leq 560 \Omega$ , MC27/ME26:  $0 \Omega \leq R_B \leq 300 \Omega$ )  
2b: alternate function: passive (option D, not FM)  
Terminals: 31, 32; 4 ... 20 mA ( $0 \Omega \leq R_B \leq 600 \Omega$ )  
Source voltage  $12 \leq U_q \leq 30$  V
- Current output 2: can be selected via software  
Function: passive  
Terminals: 33, 34; 4 ... 20 mA ( $0 \Omega \leq R_B \leq 600 \Omega$ )  
Source voltage  $12 \leq U_q \leq 30$  V

- Passive pulse output, terminals: 51, 52  
 $f_{max} = 5$  kHz, pulse width 0.1 ... 2,000 ms  
Setting range: 0.001 ... 1,000 pulses/unit  
"Closed":  $0 V \leq U_{CEL} \leq 2$  V,  $2 \text{ mA} \leq I_{CEL} \leq 65 \text{ mA}$   
"Open":  $16 V \leq U_{CEH} \leq 30$  V,  $0 \text{ mA} \leq I_{CEH} \leq 0.2 \text{ mA}$
- Active pulse output  
 $U = 16 \dots 30$  V, load  $\geq 150 \Omega$ ,  $f_{max} = 5$  kHz,
- Contact output, passive  
Terminals: 41, 42  
"Closed":  $0 V \leq U_{CEL} \leq 2$  V,  $2 \text{ mA} \leq I_{CEL} \leq 65 \text{ mA}$   
"Open":  $16 V \leq U_{CEH} \leq 30$  V,  $0 \text{ mA} \leq I_{CEH} \leq 0.2 \text{ mA}$
- Contact input, passive  
Terminals: 81, 82  
"On":  $16 V \leq U_{KL} \leq 30$  V  
"Off":  $0 V \leq U_{KL} \leq 2$  V
- Equipotential bonding "PA" (when connecting transmitter ME2 to flowmeter sensor MC26, transmitter ME2 also has to be connected to "PA").

#### Important

You can find the applicable Ex-relevant connection data in the section titled "Ex relevant specifications".

## Input and output signals, supply power ME2/MS2

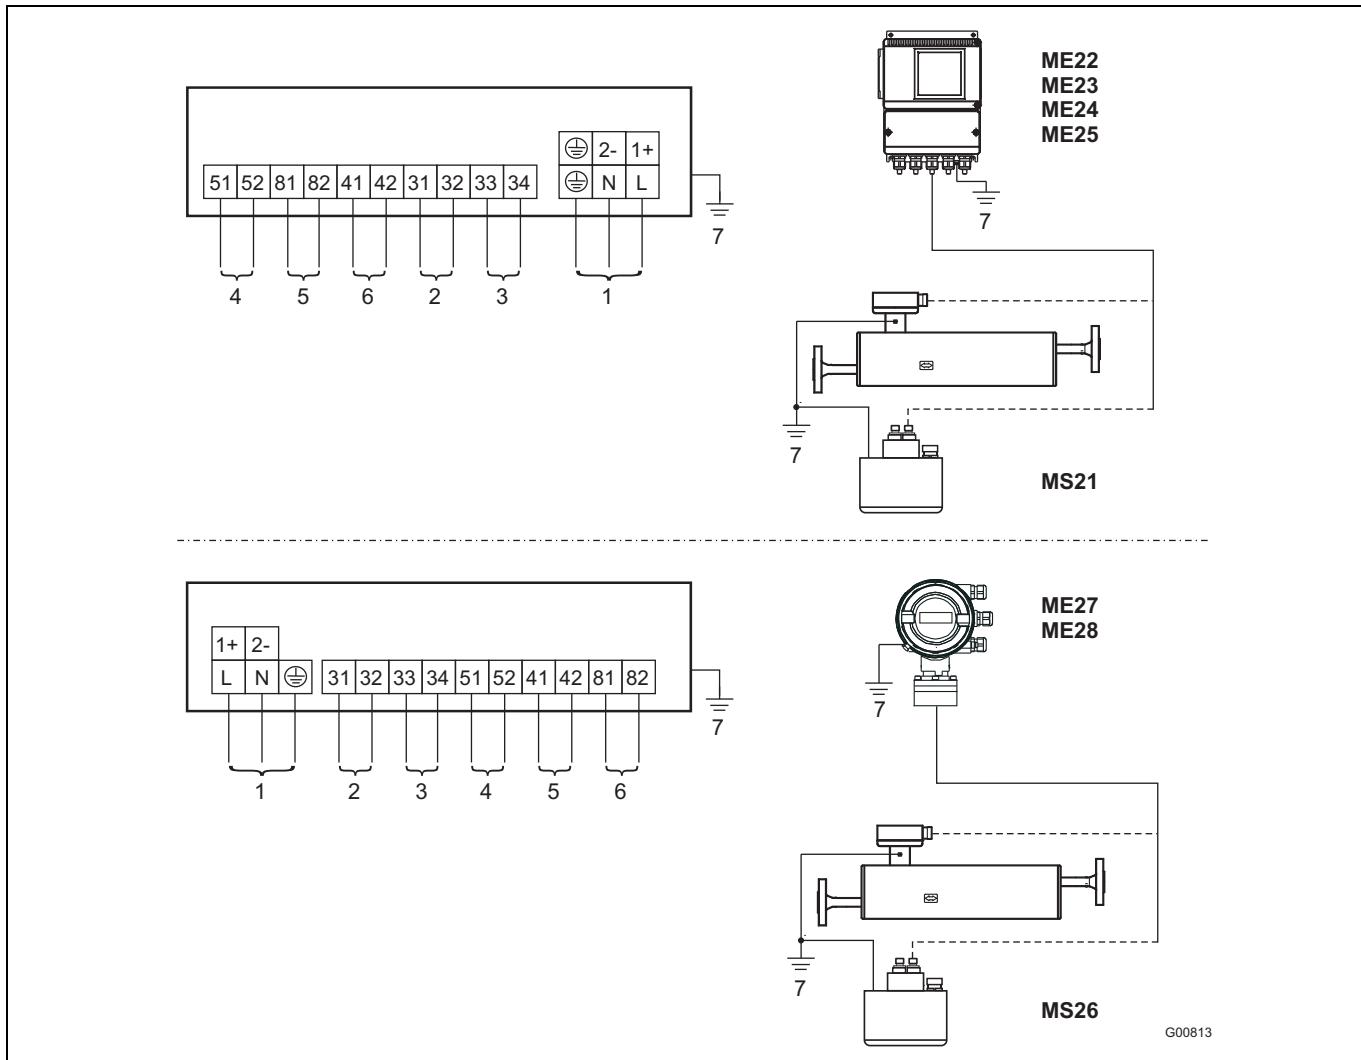

Fig. 55

- 1 Supply power  
Line voltage:  $U_{AC}$  100 ... 230 V AC, frequency 50/60 Hz,  
terminals L, N,  $\oplus$   
Low voltage:  $U_{AC}$  24 V, frequency 50/60 Hz, terminals 1+, 2-,  
 $U_{DC}$  24 V
- 2 Current output 1: can be selected via software  
2a: function: active  
Terminals: 31, 32; 0/4 ... 20 mA ( $0 \Omega \leq R_B \leq 560 \Omega$ , ME27/28:  $0 \Omega \leq R_B \leq 300 \Omega$ )  
2b: alternate function: passive (option D)  
Terminals: 31, 32; 4 ... 20 mA ( $0 \Omega \leq R_B \leq 600 \Omega$ )  
Source voltage  $12 \leq U_q \leq 30$  V
- 3 Current output 2: can be selected via software  
Function: passive  
Terminals: 33, 34; 4 ... 20 mA ( $0 \Omega \leq R_B \leq 600 \Omega$ )  
Source voltage  $12 \leq U_q \leq 30$  V

- 4a Passive pulse output, terminals: 51, 52  
 $f_{max} = 5$  kHz, pulse width 0.1 ... 2,000 ms  
Setting range: 0.001 ... 1,000 pulses/unit  
"Closed":  $0 V \leq U_{CEL} \leq 2 V$ ,  $2 \text{ mA} \leq I_{CEL} \leq 65 \text{ mA}$   
"Open":  $16 V \leq U_{CEH} \leq 30 V$ ,  $0 \text{ mA} \leq I_{CEH} \leq 0.2 \text{ mA}$
- 4b Active pulse output  
 $U = 16 \dots 30$  V, load  $\geq 150 \Omega$ ,  $f_{max} = 5$  kHz,
- 5 Contact output, passive  
Terminals: 41, 42  
"Closed":  $0 V \leq U_{CEL} \leq 2 V$ ,  $2 \text{ mA} \leq I_{CEL} \leq 65 \text{ mA}$   
"Open":  $16 V \leq U_{CEH} \leq 30 V$ ,  $0 \text{ mA} \leq I_{CEH} \leq 0.2 \text{ mA}$
- 6 Contact input, passive  
Terminals: 81, 82  
"On":  $16 V \leq U_{KL} \leq 30$  V  
"Off":  $0 V \leq U_{KL} \leq 2$  V
- 7 "PA" equipotential bonding. When transmitter ME2 is connected to flowmeter sensor MS26, transmitter ME2 also has to be connected to "PA".

## PROFIBUS PA/FOUNDATION Fieldbus, supply power for ME2/MC2

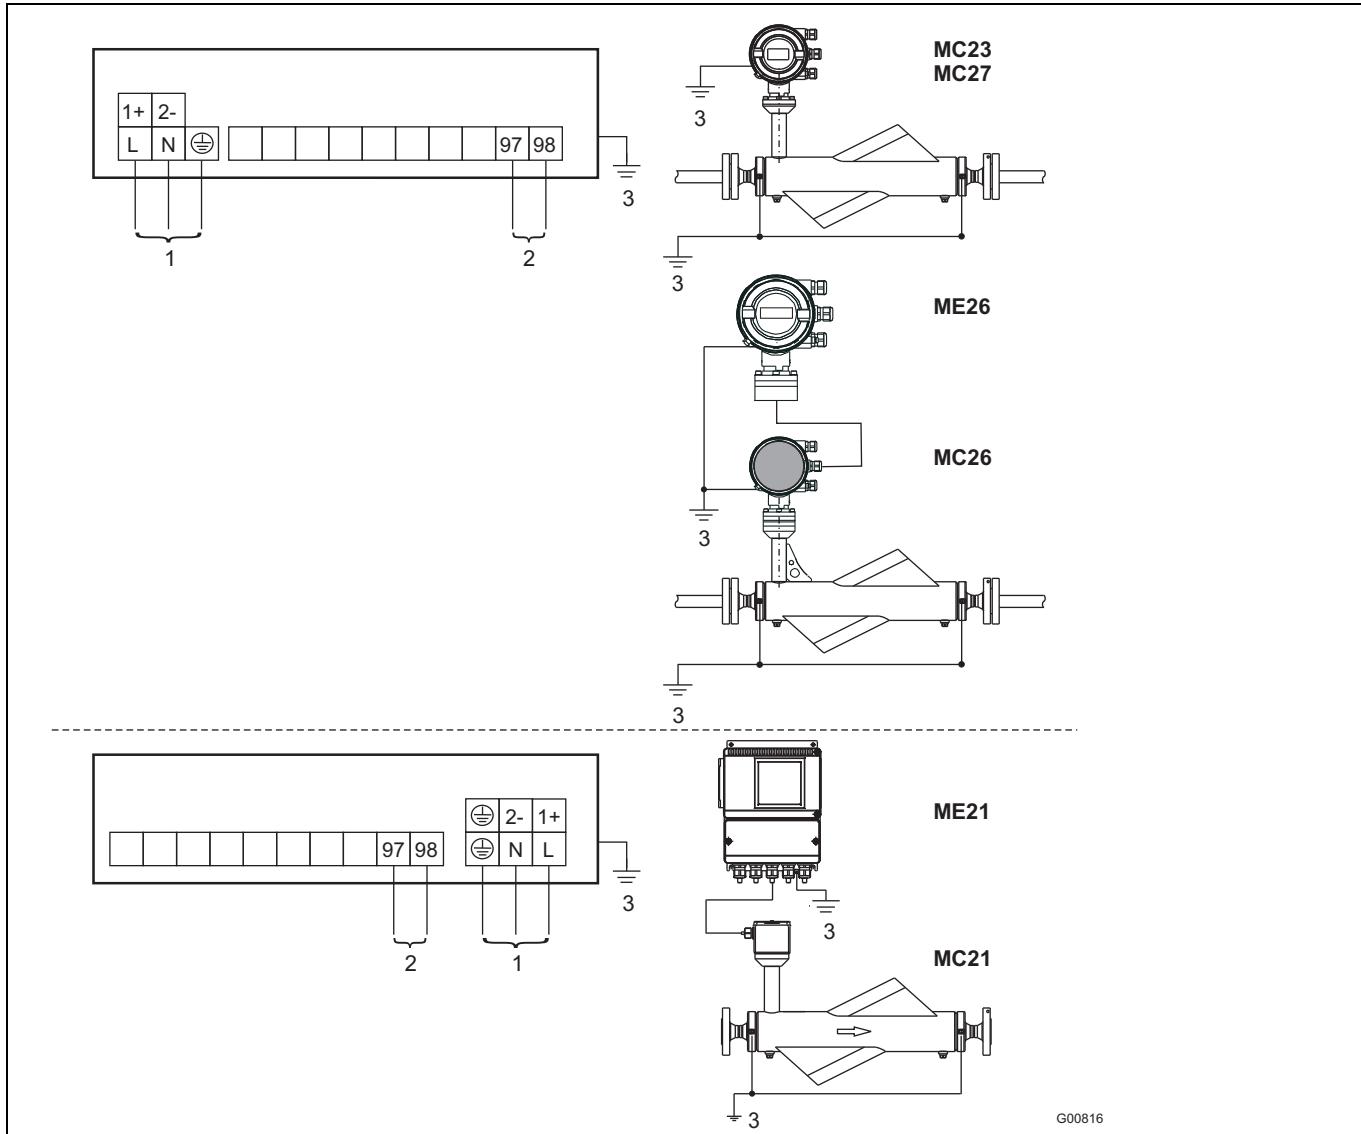

Fig. 56

- 1 Supply power
  - Line voltage:  $U_{AC}$  100 ... 230 V AC, frequency 50/60 Hz, terminals L, N,  $\ominus$
  - Low voltage:  $U_{AC}$  24, frequency 50/60 Hz, terminals 1+, 2-,  $U_{DC}$  24 V
- 2a PROFIBUS PA design conforming to IEC 61158-2 (Profile 3.0)
  - $U = 9 \dots 32 V$
  - $I = 14 \text{ mA}$  (normal operation)
  - $I = 26 \text{ mA}$  (in the event of an error / FDE)
  - Terminals: 97 / 98
  - Connection example via M12 plug, see Fig. 50

- 2b FOUNDATION Fieldbus design conforming to IEC 61158-2
  - $U = 9 \dots 32 V$
  - $I = 14 \text{ mA}$  (normal operation)
  - $I = 26 \text{ mA}$  (in the event of an error / FDE)
  - Terminals: 97/98
  - Connection example via M12 plug, see Fig. 50
- 3 The precise position of the ground terminals may vary according to the device type. However, the position is appropriately labeled in each case. When transmitter ME2 is connected to flowmeter sensor MS26, transmitter ME2 also has to be connected to equipotential bonding "PA".

## PROFIBUS PA/FOUNDATION Fieldbus, supply power for ME2/MS2

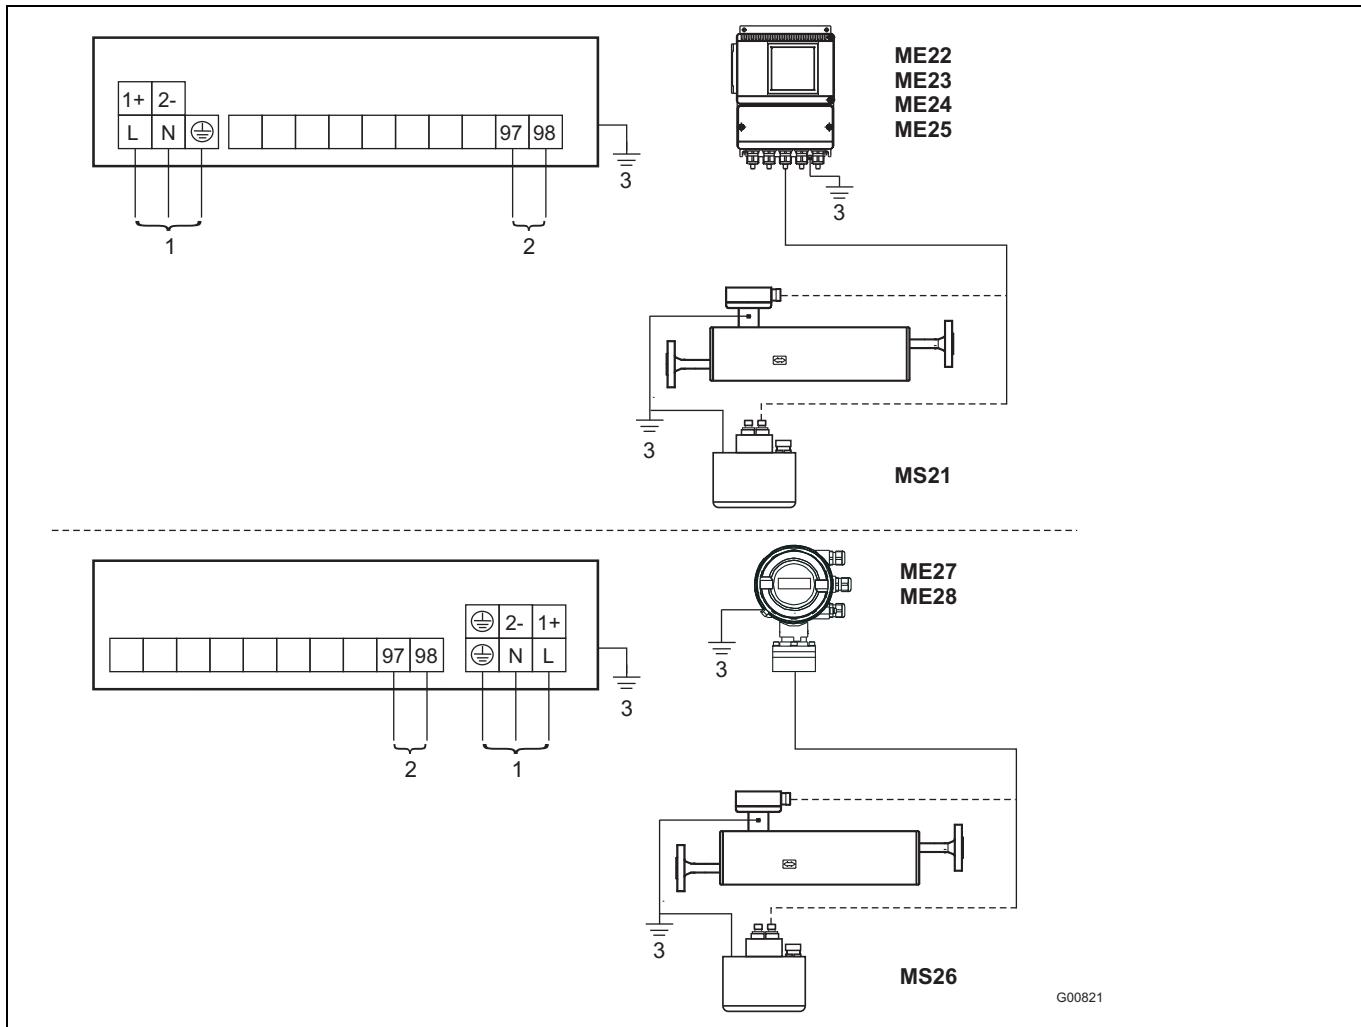

Fig. 57:

- 1 Supply power
 

Line voltage:  $U_{AC}$  100 ... 230 V AC, frequency 50/60 Hz, terminals L, N,  $\oplus$   
 Low voltage:  $U_{AC}$  24, frequency 50/60 Hz, terminals 1+, 2-,  $U_{DC}$  24 V
- 2a PROFIBUS PA design conforming to IEC 61158-2 (Profile 3.0)
 

$U = 9 \dots 32$  V  
 $I = 14$  mA (normal operation)  
 $I = 26$  mA (in the event of an error / FDE)  
 Terminals: 97 / 98  
 Connection example via M12 plug, see Fig. 50

- 2b FOUNDATION Fieldbus design conforming to IEC 61158-2
 

$U = 9 \dots 32$  V  
 $I = 14$  mA (normal operation)  
 $I = 26$  mA (in the event of an error / FDE)  
 Terminals: 97/98  
 Connection example via M12 plug, see Fig. 50
- 3 The precise position of the ground terminals may vary according to the device type. However, the position is appropriately labeled in each case. When transmitter ME2 is connected to flowmeter sensor MS26, transmitter ME2 also has to be connected to equipotential bonding "PA".

## 5.6 Dimensions

### 5.6.1 Transmitter housing and suggested installation method

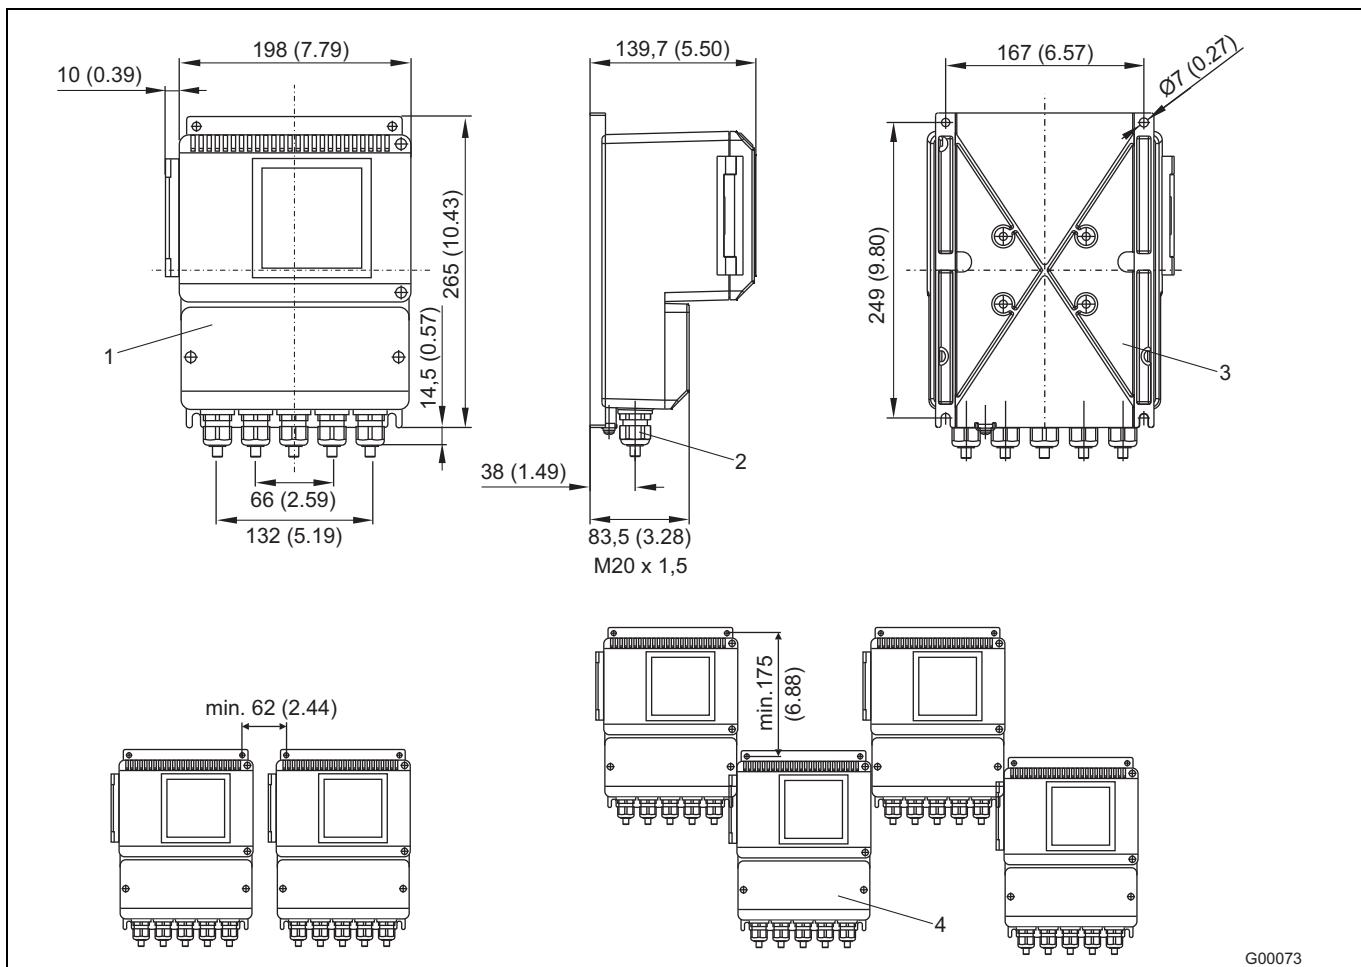

Fig. 58: Dimensions in mm (inch)

- 1 Field-mount housing with window
- 2 Cable gland M20 x 1.5
- 3 Installation holes for pipe mounting set, for 2" pipe installation; mounting set available on request (order no. 612B091U07)
- 4 Protection class IP 67

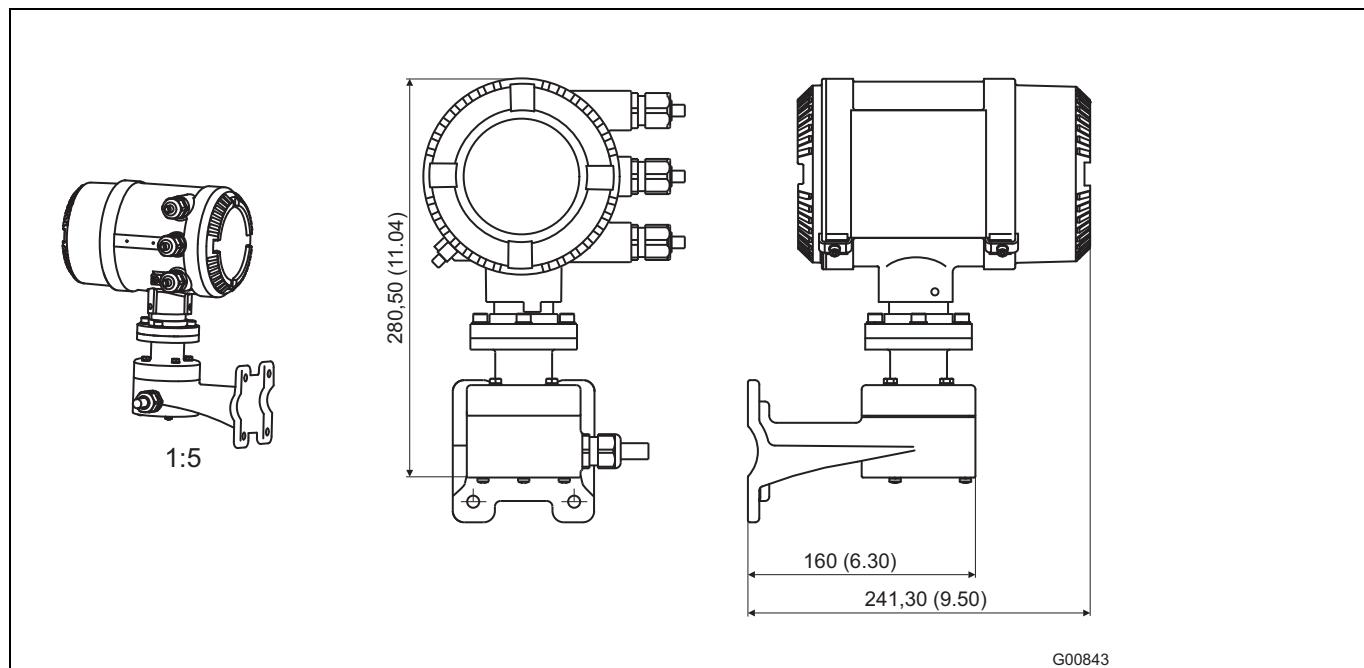

Fig. 59: Dimensions of ME26/27/28 transmitter housing

## 5.7 Ordering information

External transmitter, DSP technology, for remote mount sensor MC2, MS2

4) Only for ATEX, IECEx Zone 1 or FM Div. 1 and with "ia" outputs.

5) Not with ATEX, IECEx, or FM

## 6 Ex relevant specifications in accordance with ATEX/IECEx

### 6.1 Safety-relevant information ATEX / IECEx

#### Overview of the different output options

	<b>ATEX/IECEx Zone 2</b>	<b>ATEX/IECEx Zone 1</b>
I Output option A/B in the order number	<ul style="list-style-type: none"> <li>- Current output 1: active</li> <li>- Current output 2: passive</li> <li>- Pulse output: active/passive, switchable</li> <li>- Contact input and output: passive</li> </ul>	<ul style="list-style-type: none"> <li>- Current output 1: active</li> <li>- Current output 2: passive</li> <li>- Pulse output: active/passive, switchable</li> <li>- Contact input and output: passive</li> </ul>
II Output option D in the order number		<ul style="list-style-type: none"> <li>- Current output 1: passive</li> <li>- Current output 2: passive</li> <li>- Pulse output: active/passive, switchable</li> <li>- Contact input and output: passive</li> </ul>
III Output option X and communication option 3, 5, or 7 in the order number	<ul style="list-style-type: none"> <li>- Fieldbus communication (PROFIBUS PA/FOUNDATION Fieldbus)</li> </ul>	<ul style="list-style-type: none"> <li>- Fieldbus communication (PROFIBUS PA/FOUNDATION Fieldbus)</li> </ul>

#### Version I: Active/Passive current outputs

	Protection type "nA" (Zone 2)		General operating values	
	U (V)	I (mA)	U <sub>b</sub> (V)	I <sub>b</sub> (mA)
Current output 1 Active Terminals 31/32	30	30	30	30
Current output 2 Passive Terminals 33/34	30	30	30	30
Pulse output Active or passive Terminals 51/52	30	65	30	65
Contact output Passive Terminals 41/42	30	65	30	65
Contact input Passive Terminals 81/82	30	10	30	10

All inputs and outputs are electrically isolated from each other and from the supply power.

Types: ME26/ME27/ME28 and MC27												
	Protection type "nA" (Zone 2)		General operating values		Protection type "e" (Zone 1)		Protection type "ib" (Zone 1)					
	U <sub>i</sub> (V)	I <sub>i</sub> (mA)	U <sub>b</sub> (V)	I <sub>b</sub> (mA)	U (V)	I (A)	U <sub>o</sub> (V)	I <sub>o</sub> (mA)	P <sub>o</sub> (mW)	C <sub>o</sub> (nF)	C <sub>o pa</sub> (nF)	
Current output 1 Active Terminals 31/32 Terminal 32 is connected to "PA"	30	30	30	30	60	35	20	100	500	217	0	3.8
							U <sub>i</sub> (V)	I <sub>i</sub> (mA)	P <sub>i</sub> (mW)	C <sub>i</sub> (nF)	C <sub>i pa</sub> (nF)	L <sub>i</sub> (mH)
							60	100	500	2.4	2.4	0.17
Current output 2 Passive Terminals 33/34 Terminal 34 is connected to "PA"	30	30	30	30	60	35	30	100	760	2.4	2.4	0.17
Pulse output Passive Terminals 51/52	30	65	30	65	60	35	15	30	115	2.4	2.4	0.17
Contact output Passive Terminals 41/42	30	65	30	65	60	35	15	30	115	2.4	2.4	0.17
Contact input Passive Terminals 81/82	30	10	30	10	60	35	30	60	500	2.4	2.4	0.17

All inputs and outputs are electrically isolated from each other and from the supply power. Only current outputs 1 and 2 are not electrically isolated from one another.

## Version II: Passive/Passive current outputs

Types: ME26/ME27/ME28 and MC27												
	Protection type "nA" (Zone 2)		General operating values		Protection type "e" (Zone 1)		Protection type "ia" (Zone 1)					
	U <sub>i</sub> (V)	I <sub>i</sub> (mA)	U <sub>b</sub> (V)	I <sub>b</sub> (mA)	U (V)	I (A)	U <sub>i</sub> (V)	I <sub>i</sub> (mA)	P <sub>i</sub> (mW)	C <sub>i</sub> (nF)	C <sub>i pa</sub> (nF)	
Current output 1 Passive Terminals 31/32	30	30	30	30	60	35	60	300	2000	0,47	0,47	0,17
Current output 2 Passive Terminals 33/34	30	30	30	30	60	35	60	300	2000	0,47	0,47	0,17
Pulse output Passive Terminals 51/52	30	65	30	65	60	35	60	300	2000	0,47	0,47	0,17
Contact output Passive Terminals 41/42	30	65	30	65	60	35	60	300	2000	0,47	0,47	0,17
Contact input Passive Terminals 81/82	30	10	30	10	60	35	60	300	2000	0,47	0,47	0,17

All inputs and outputs are electrically isolated from each other and from the supply power.

**Version III: Fieldbus communication**

Types ME21/ME22/ME23/ME24/ME25/ME26/ME27/ME28 and MC23/MC27										
	Protection type "nL" (Zone 2)		General operating values			Protection type "n" FNICO (Zone 2)				
	U (V)	I (mA)	U <sub>b</sub> (V)	I <sub>b</sub> (mA)	U <sub>i</sub> (V)	I <sub>i</sub> (mA)	P <sub>i</sub> (mW)	C <sub>i</sub> (nF)	C <sub>i</sub> pa (nF)	L <sub>i</sub> (mH)
Fieldbus Passive Terminals 97/98	60	500	32	10	60	500	7,000	0	0	0.17

The output and supply power are electrically isolated.

Types ME26/ME27/ME28 and MC27																
	Type of protection "e" (Zone 1)		General operating values		Protection type "ia" FISCO (Zone 1)					Protection type "ia" (Zone 1)						
	U (V)	I (A)	U <sub>b</sub> (V)	I <sub>b</sub> (mA)	U <sub>i</sub> (V)	I <sub>i</sub> (mA)	P <sub>i</sub> (mW)	C <sub>i</sub> (nF)	C <sub>i</sub> pa (nF)	L <sub>i</sub> (mH)	U <sub>i</sub> (V)	I <sub>i</sub> (mA)	P <sub>i</sub> (mW)	C <sub>i</sub> (nF)	C <sub>i</sub> pa (nF)	L <sub>i</sub> (mH)
Fieldbus Passive Terminals 97/98	60	35	32	10	60	380	5320	0	0	0.17	60	380	5320	0	0	0.17

The output and supply power are electrically isolated.

**Special conditions**

The output circuits are designed in such a way that they can be connected to both intrinsically-safe and non-intrinsically-safe circuits. It is not permitted to combine intrinsically safe and non-intrinsically safe circuits. On intrinsically safe circuits, equipotential bonding must be in place along the entire length of the cable used for the current outputs. The rated voltage of the non-intrinsically safe circuits is U<sub>M</sub> = 60 V.

The contact output and the pulse output (terminals 41 / 42 and 51 / 52) can be wired internally as a NAMUR contact for the purpose of connecting a NAMUR amplifier.

The cable glands are supplied in black by default. If the signal outputs are wired to intrinsically safe circuits, we recommend that you use the light blue caps supplied for the appropriate cable entries.

**Important**

If the protective conductor (PE) is connected in the flowmeter's terminal box, you must ensure that no dangerous potential difference can arise between the protective conductor (PE) and the equipotential bonding (PA) in the potentially explosive area.

## 6.1.1 ATEX/IECEx Ex approval

EC type-examination certificate in accordance with ATEX and IECEx

KEMA ATEX 08ATEX0150 X, KEMA 08 ATEX 0151X, or IECEx KEM 08.0034X

### 6.1.1.2 Flowmeter sensor MS2 in accordance with ATEX

Model	MS2 Zone 1
Ambient temperature	-20 ... 50 °C (-4 ... 122 °F)
<b>Temperature class</b>	
T1	180 °C (356 °F)
T2	180 °C (356 °F)
T3	180 °C (356 °F)
T4	125 °C (257 °F)
T5	80 °C (176 °F)
T6	-

Ambient and process conditions:

$T_{amb}$  -20 ... 50 °C (-4 ... 122 °F)

$T_{medium}$  -50 ... 180 °C (-58 ... 356 °F)

Protection class IP 65, IP 67, and NEMA 4X/type 4X

Specific coding applies for ATEX and IECEx, depending on the design of the flowmeter sensor (compact or separate); see the overview on page 4).

#### Design MS26

Zone 1	Designation
ATEX	II 2 G Ex ib IIC T5 ... T3

### 6.1.1.3 Transmitter ME2, separate design, in accordance with ATEX and IECEx

Ambient and process conditions:

$T_{amb}$  -20 ... 60 °C (-4 ... 140 °F)

Protection class IP 65, IP 67, and NEMA 4X/type 4X

Specific coding applies for ATEX and IECEx, depending on the design of the flowmeter sensor (compact or separate); see the overview on page 4).

#### Design ME21 / ME24 / ME25 M, N

	FISCO field device	FISCO fieldbus

## 7 Ex relevant specifications in accordance with cFMus

### 7.1 Data relating to MC2x operation

#### 7.1.1 General information

Type of protection	Ex designation
Explosion-proof	XP-IS/I, II, III/1/BCD/T* TA= *; type NEMA 4x
Dust-ignition-proof	DIP/II, III/1 EFG/T* TA= *; type NEMA 4x
Intrinsically safe	IS/I, II, III/I/BCDEFG/T* TA = *; type NEMA 4x
Non-incendive	NI/I, II, III/2/ABCDEFG/T* TA = *; type NEMA 4x

(T\* = see FM temperature classes)

In the case of the remote mount design, the signal cable between the flowmeter sensor and the transmitter must measure at least 5 m (16.4 ft).

Ambient and process conditions	
T <sub>amb</sub>	-20 ... 60 °C (-4 ... 140 °F)
T <sub>amb</sub> , optional	-40 ... 60 °C (-40 ... 140 °F) (only with devices featuring integral mount design)
T <sub>Medium</sub>	-50 ... 200 °C (-58 ... 392 °F)
Protection class	IP 65, IP 67 and NEMA 4x/type 4x

Specific FM coding applies, depending on the design of the flowmeter sensor (integral mount or remote mount design) For detailed information, please refer to the section titled 1.2 "FM device overview (PID: 3036514)".

#### 7.1.2 Temperature data

##### Types: MC26, MC27 in Class I Div. 1

Temperature class	Ambient temperature		
	≤40 °C (≤104 °F)	≤50 °C (≤122 °F)	≤60 °C (≤140 °F)
T1	200 °C (392 °F)	200 °C (392 °F)	200 °C (392 °F)
T2	200 °C (392 °F)	200 °C (392 °F)	200 °C (392 °F)
T3	185 °C (365 °F)	180 °C (356 °F)	180 °C (356 °F)
T4	125 °C (257 °F)	120 °C (248 °F)	120 °C (248 °F)
T5	85 °C (185 °F)	85 °C (185 °F)	75 °C (167 °F)
T6	65 °C (149 °F)	65 °C (149 °F)	60 °C (140 °F)

##### Types: MC21, MC23 in Class I Div. 2

Temperature class	Ambient temperature		
	≤40 °C (≤104 °F)	≤50 °C (≤122 °F)	≤60 °C (≤140 °F)
T1	200 °C (392 °F)	200 °C (392 °F)	180 °C (356 °F)
T2	200 °C (392 °F)	200 °C (392 °F)	180 °C (356 °F)
T3	180 °C (356 °F)	180 °C (356 °F)	180 °C (356 °F)
T4	115 °C (239 °F)	115 °C (239 °F)	115 °C (239 °F)
T5	80 °C (176 °F)	80 °C (176 °F)	75 °C (167 °F)
T6	60 °C (140 °F)	60 °C (140 °F)	60 °C (140 °F)

## 7.2 Data relating to MS2x operation

### 7.2.1 General information

Type of protection	Ex designation
Explosion-proof	XP-IS/I, II, III/1/BCD/T* TA= *; type NEMA 4x
Dust-ignition-proof	DIP/II, III/1 EFG/T* TA= *; type NEMA 4x
Intrinsically safe	IS/I, II, III/I/BCDEFG/T* TA = *; type NEMA 4x
Non-incendive	NI/I, II, III/2/ABCDEFG/T* TA = *; type NEMA 4x

(T\* = see FM temperature classes)

In the case of the remote mount design, the signal cable between the flowmeter sensor and the transmitter must measure at least 5 m (16.4 ft).

<b>Ambient and process conditions</b>	
T <sub>amb</sub>	-20 ... 50 °C (-4 ... 122 °F)
T <sub>Medium</sub>	-50 ... 180 °C (-58 ... 356 °F)
Protection class	IP 65, IP 67 and NEMA 4x/type 4x

Specific FM coding applies, depending on the design of the flowmeter sensor (integral mount or remote mount design) For detailed information, please refer to the section titled 1.2 "FM device overview (PID: 3036514)".

### 7.2.2 Temperature data

Type: MS2 in Class I Div. 1 or Class I Div. 2

	<b>Ambient temperature</b>	
	-20 ... 50 °C (-4 ... 122 °F)	
<b>Temperature class</b>	<b>Maximum permissible fluid temperature</b>	
T1	180 °C (356 °F)	
T2	180 °C (356 °F)	
T3	180 °C (356 °F)	
T4	125 °C (257 °F)	
T5	80 °C (176 °F)	
T6	-	

### 7.3 Electrical data

#### Overview of the different output options

	<b>Class I Div. 2</b>	<b>Class I Div. 1</b>
I Output option A/B in the order number	<ul style="list-style-type: none"> <li>- Current output 1: active</li> <li>- Current output 2: passive</li> <li>- Pulse output: active/passive, switchable</li> <li>- Contact input and output: passive</li> </ul>	<ul style="list-style-type: none"> <li>- Current output 1: active</li> <li>- Current output 2: passive</li> <li>- Pulse output: active/passive, switchable</li> <li>- Contact input and output: passive</li> </ul>
II Output option D in the order number		<ul style="list-style-type: none"> <li>- Current output 1: passive</li> <li>- Current output 2: passive</li> <li>- Pulse output: active/passive, switchable</li> <li>- Contact input and output: passive</li> </ul>
III Output option X and communication option 3, 5, or 7 in the order number	<ul style="list-style-type: none"> <li>- Fieldbus communication (PROFIBUS PA/FOUNDATION Fieldbus)</li> </ul>	<ul style="list-style-type: none"> <li>- Fieldbus communication (PROFIBUS PA/FOUNDATION Fieldbus)</li> </ul>

#### 7.3.1 Electrical data relating to Div. 1

##### Version I: Active/Passive current outputs

Types: ME26/27/28, MC27 fieldbus: Active HART

Inputs and outputs	Type of protection IS					
	V <sub>max,o</sub> [V]	I <sub>max,o</sub> [mA]	P <sub>o</sub> [mW]	C <sub>o</sub> [nF]	C <sub>o PA</sub> [nF]	L <sub>o</sub> [mH]
<b>Current output 1 active</b> Terminal 31/32	20	100	500	217	0	3,8
	V <sub>Max</sub> [V]	I <sub>Max</sub> [mA]	P <sub>i</sub> [mW]	C <sub>i</sub> [nF]	C <sub>i PA</sub> [nF]	L <sub>i</sub> [mH]
	60	100	500	2,4	2,4	0,17
<b>Current output 2</b> <b>passive</b> Terminal 33/34	30	100	760	2,4	2,4	0,17
<b>Digital output</b> Terminal 41/42	15	30	115	2,4	2,4	0,17
<b>Digital input</b> Terminal 81/82	30	60	500	2,4	2,4	0,17
<b>Pulse output</b> Terminal 51/52	15	30	115	2,4	2,4	0,17

All inputs and outputs are electrically isolated from each other and from the supply power. Only current outputs 1 and 2 are not electrically isolated from one another.

**Version II: Passive/Passive current outputs**

Types: ME26/27/28, MC27 fieldbus: Passive HART

Inputs and outputs	Type of protection IS					
	V <sub>max</sub> [V]	I <sub>max</sub> [mA]	P <sub>i</sub> [mW]	C <sub>i</sub> [nF]	C <sub>i PA</sub> [nF]	L <sub>i</sub> [mH]
<b>Current output 1 passive</b> Terminal 31/32	60	300	2000	0,47	0,47	0,17
<b>Current output 2 passive</b> Terminal 33/34	60	300	2000	0,47	0,47	0,17
<b>Digital output</b> Terminal 41/42	60	300	2000	0,47	0,47	0,17
<b>Digital input</b> Terminal 81/82	60	300	2000	0,47	0,47	0,17
<b>Pulse output</b> Terminal 51/52	60	300	2000	0,47	0,47	0,17

All inputs and outputs are electrically isolated from each other and from the supply power.

**Version III: Fieldbus communication**

Types: ME26/27/28, MC27 fieldbus: PA/FF

Inputs and outputs	Type of protection IS FISCO						Type of protection IS					
	V <sub>Max</sub> [V]	I <sub>Max</sub> [mA]	P <sub>i</sub> [mW]	C <sub>i</sub> [nF]	C <sub>i PA</sub> [nF]	L <sub>i</sub> [mH]	V <sub>Max</sub> [V]	I <sub>Max</sub> [mA]	P <sub>i</sub> [mW]	C <sub>i</sub> [nF]	C <sub>i PA</sub> [nF]	L <sub>i</sub> [mH]
<b>Passive fieldbus</b> Terminal 97/98	60	380	5320	0	0	0,17	60	380	5320	0	0	0,17

The output and supply power are electrically isolated.

**Special connection conditions:**

The output circuits are designed in such a way that they can be connected to both intrinsically-safe and non-intrinsically-safe circuits. It is not permitted to combine intrinsically safe and non-intrinsically safe circuits. On intrinsically safe circuits, equipotential bonding must be in place along the entire length of the cable used for the current outputs.

The rated voltage of the non-intrinsically safe circuits is U<sub>M</sub> = 60 V.

Provided that rated voltage U<sub>M</sub> = 60 V is not exceeded if connections are established to non-intrinsically safe external circuits, intrinsic safety is still guaranteed.

**Important (Notice)**

The housing for the transmitter and flowmeter sensor must be connected to the potential equalization PA. The operator must ensure that when connecting the protective conductor (PE) no potential differences can occur between protective conductor and potential equalization (PA).

### 7.3.2 Electrical data relating to Div. 2

#### Version I: Active/Passive current outputs

Types: ME21/24/25, MC23 fieldbus: HART

Inputs and outputs		Type of protection NI					
		Vmax <sub>o</sub> [V]			Imax <sub>o</sub> [mA]		
<b>Current output 1</b> Terminal 31/32		30			30		
<b>Current output 2</b> <b>passive</b> Terminal 33/34		30			30		
<b>Digital output</b> Terminal 41/42		30			65		
<b>Digital input</b> Terminal 81/82		30			10		
<b>Pulse output</b> Terminal 51/52		30			65		

All inputs and outputs are electrically isolated from each other and from the supply power.

#### Version III: Fieldbus communication

Types: ME21/24/25, MC23 fieldbus: PA/FF

Inputs and outputs	Type of protection NI FNICO						Type of protection NI					
	Vmax [V]	Imax [mA]	P <sub>i</sub> [mW]	C <sub>i</sub> [nF]	C <sub>i PA</sub> [nF]	L <sub>i</sub> [mH]	Vmax [V]	Imax [mA]	P <sub>i</sub> [mW]	C <sub>i</sub> [nF]	C <sub>i PA</sub> [nF]	L <sub>i</sub> [mH]
Passive fieldbus Terminal 97/98	60	500	7000	0	0	0,17	60	500	7000	0	0	0,17

The output and supply power are electrically isolated.

#### Important (Notice)

The housing for the transmitter and flowmeter sensor must be connected to the potential equalization PA. The operator must ensure that when connecting the protective conductor (PE) no potential differences can occur between protective conductor and potential equalization (PA).
