

■ The Electromagnetic Flowmeter (EMF) can be used to accurately measure the flowrate of liquids which have an electrical conductivity greater than 5 $\mu\text{S}/\text{cm}$ (20 $\mu\text{S}/\text{cm}$ for demineralized water). The COPA-XE is a flow measurement system in a Compact Design. The MAG-XE flow measurement system consists of a flowmeter primary and a remote mounted converter

■ **Flowmeter primary for hygienic processes**

- The basic flowmeter body is installed using threaded adapters which are matched to the respective pipeline connections. The following connections are available:
 - Weld stubs
 - Food industry fittings per DIN 11851
 - Tri-Clamp
 - Wafer and fixed flange designs
 - Certificates EHEDG, FML, 3A

■ **Flowmeter primary for the process industry and water/waste water**

- Flange and wafer designs
- DVGW Test Report
- Certifiable for cold and waste water and fluids other than water

■ **Converter**

- Communication PROFIBUS DP, HART-Protocol, FOUNDATION Fieldbus, PROFIBUS PA
- Pulse output, configurable (active/passive)
- Data secured in a plug-in EEPROM
- Graphic display
- Self-monitoring functions
- Comprehensive test and simulation functions

3 General information

3.1 Measuring Accuracy

3.1.1 Reference Conditions per EN 29104

Fluid Temperatures	20 °C (68 °F) ± 2 K
Ambient Temperature	20 °C (68 °F) ± 2 K
Supply Power	Line voltage per name plate UN ± 1 % and Frequency f ± 1 %
Installation Conditions	- Upstream >10xDN straight section - Downstream >5xDN straight section
Warm Up Phase	30 min

3.1.2 Maximum Measurement error

Pulse Output (Standard Calibration; 0.5% of rate):

- $Q > 0.07 \text{ Range}_{\max} \pm 0.5 \% \text{ of rate}$
- $Q < 0.07 \text{ Range}_{\max} \pm 0.00035 \text{ Range}_{\max}$

Range_{\max} = maximum flowrate for the flowmeter size 10 m/s

Pulse Output (Optional Calibration; 0.25 % of rate):

- $Q > 0.14 \text{ Range}_{\max} \pm 0.25 \% \text{ of rate}$
- $Q < 0.14 \text{ Range}_{\max} \pm 0.00035 \text{ Range}_{\max}$

Range_{\max} = maximum flowrate for the flowmeter size 10 m/s

Analog Output Effects

Same as pulse output plus $\pm 0.1 \% \text{ of rate}$.

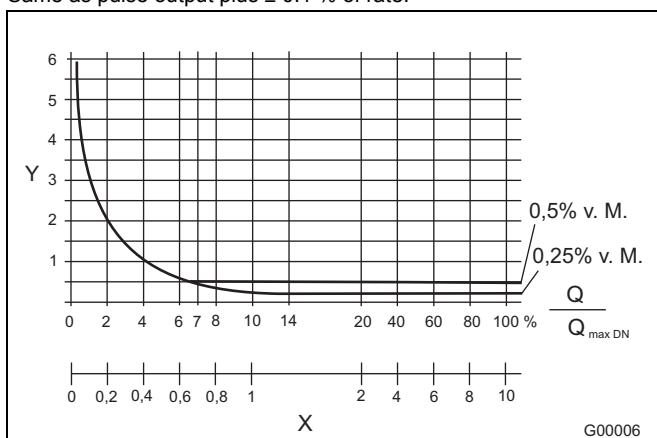

Fig. 1

Y Accuracy ± of rate in [%]

X Flow velocity v in [m/s]

3.2 Grounding

The grounding of the flowmeter primary is essential for both safety reasons, and to ensure trouble-free operation of the electromagnetic flowmeter. The ground screws on the flowmeter primary are to be brought to ground potential. For technical reasons, this potential should be identical to the potential of the metering fluid, if possible.

For plastic or insulated lined pipelines, the fluid is grounded by installing ground plates. When there are stray currents present in the pipeline, a ground plate is recommended on both ends of the meter primary.

To comply with the EMC- and Low Voltage Regulations the connection box/converter must be grounded in addition to the meter tube of the flowmeter primary.

3.3 Installation Requirements

The following points must be observed for the installation:

- The meter tube must always be completely full.
- The flow direction must correspond to the identification if present.
- The maximum torque for all flange connections must be complied with.
- The devices must be installed without mechanical tension (torsion, bending).
- Flanged/wafer design flowmeters with coplanar counter flanges may only be installed with suitable seals.
- Use flange seals made from a compatible material for the fluid and fluid temperatures.
- Seals must not extend into the flow area since possible turbulence could influence the device accuracy.
- The pipeline may not exert any unallowable forces and torques on the device.
- Do not remove the plugs in the cable connectors until you are ready to install the electrical cable.
- Install the separate converter (MAG-XE) at a largely vibration-free location.
- Do not expose the converter to direct sunlight or provide for appropriate sun protection where necessary.

3.3.1 Electrode axis

Electrode axis (1) should be horizontal if at all possible or no more than 45° from horizontal.

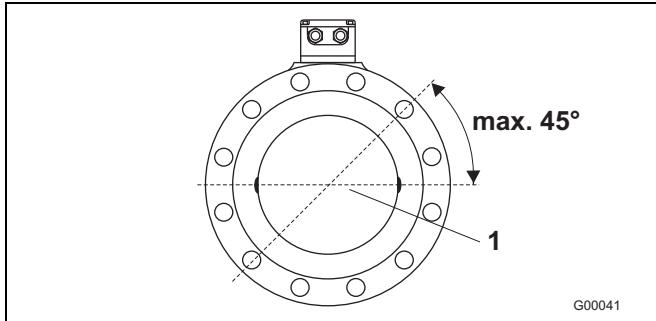

Fig. 2

3.3.2 In- and outlet pipe sections

Straight inlet section	Straight outlet section
$\geq 3 \times DN$	$\geq 2 \times DN$

DN = Flowmeter primary size

- Notice: For devices subject to calibration for commercial use, special conditions apply, see chapter "Approved EMF for custody transfer".
- Do not install fittings, manifolds, valves etc. directly in front of the meter tube (1).
- Butterfly valves must be installed so that the valve plate does not extend into the flowmeter primary.
- Valves or other turn-off components should be installed in the outlet pipe section (2).
- For compliance with the measuring accuracy, observe the inlet and outlet pipe sections.

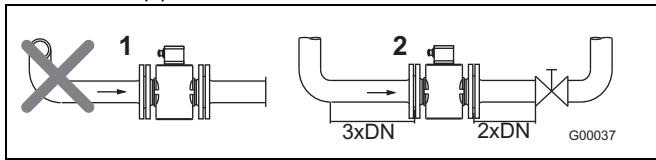

Fig. 3

3.3.3 Vertical connections

- Vertical installation for measurement of abrasive fluids, flow preferably from below to above.

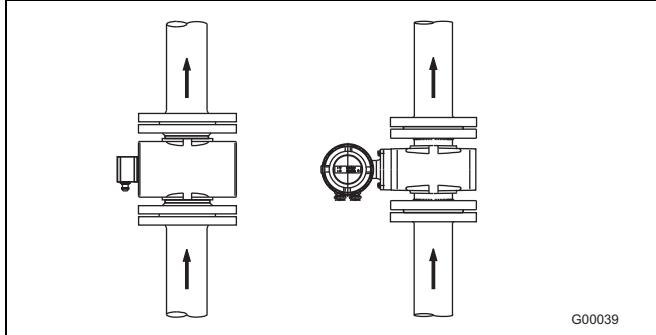

Fig. 4

3.3.4 Horizontal connections

- Meter tube must always be completely full.
- Provide for a slight incline of the connection for degassing.

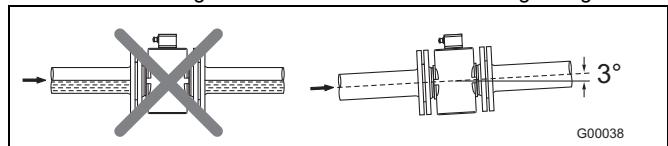

Fig. 5

3.3.5 Free inlet or outlet

- Do not install the flowmeter at the highest point or in the draining-off side of the pipeline, flowmeter runs empty, air bubbles can form (1).
- Provide for a siphon fluid intake for free inlets or outlets so that the pipeline is always full (2).

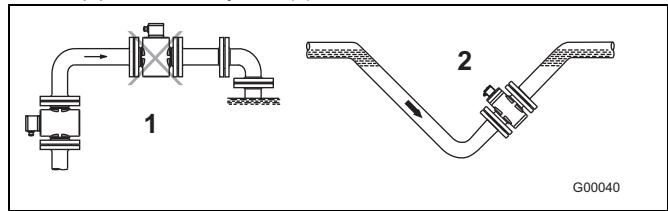

Fig. 6

3.3.6 Strongly contaminated fluids

- For strongly contaminated fluids, a bypass connection according to the figure is recommended so that operation of the system can continue to run without interruption during the mechanical cleaning.

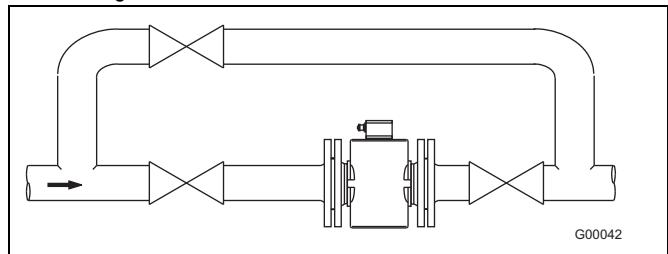

Fig. 7

3.3.7 Installation in the vicinity of pumps

- For flowmeter primaries which are to be installed in the vicinity of pumps or other vibration generating equipment, the utilization of mechanical snubbers is advantageous.

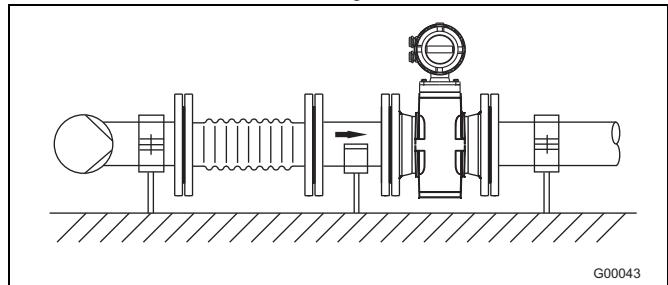

Fig. 8

3.3.8 Installation in larger size pipelines

Determine the arising pressure loss for use of flanged reducers (1):

1. Calculate the diameter ratio d/D .
2. Determine the flow velocity from the flow range nomograph (Fig. 10).
3. Read the pressure drop on the Y-axis in Fig. 10.

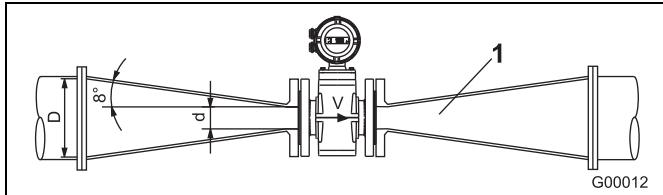

Fig. 9

- d = Inside diameter of the flowmeter
- v = Flow velocity [m/s]
- Δp = Pressure drop [mbar]
- D = Inside diameter of the pipeline

Nomograph for pressure drop determinations

For adaptor with $\alpha/2 = 8^\circ$

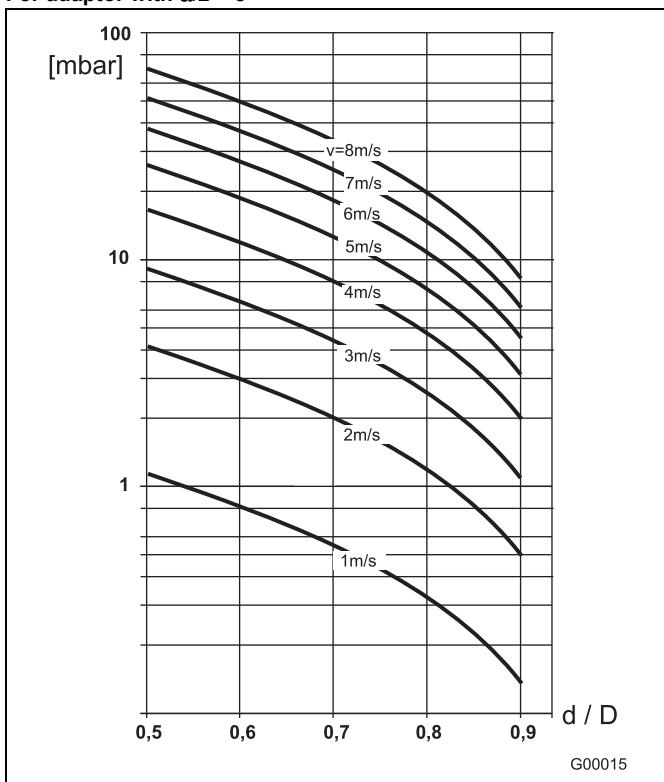

Fig. 10

3.5 Flowrate nomograph

The volumetric flowrate is a function of both the flow velocity and the flowmeter size. The flow range nomograph shows the flowrates which can be metered with a specific flowmeter size and also which flowmeter sizes are suitable for a specific flowrate.

Example:

Flowrate = 7 m³/h (maximum value = flow range end value). Suitable are flowmeter primary sizes DN 20 : 3/4" to DN 65 : 2-1/2" for flow velocities between 0.5 and 10 m/s.

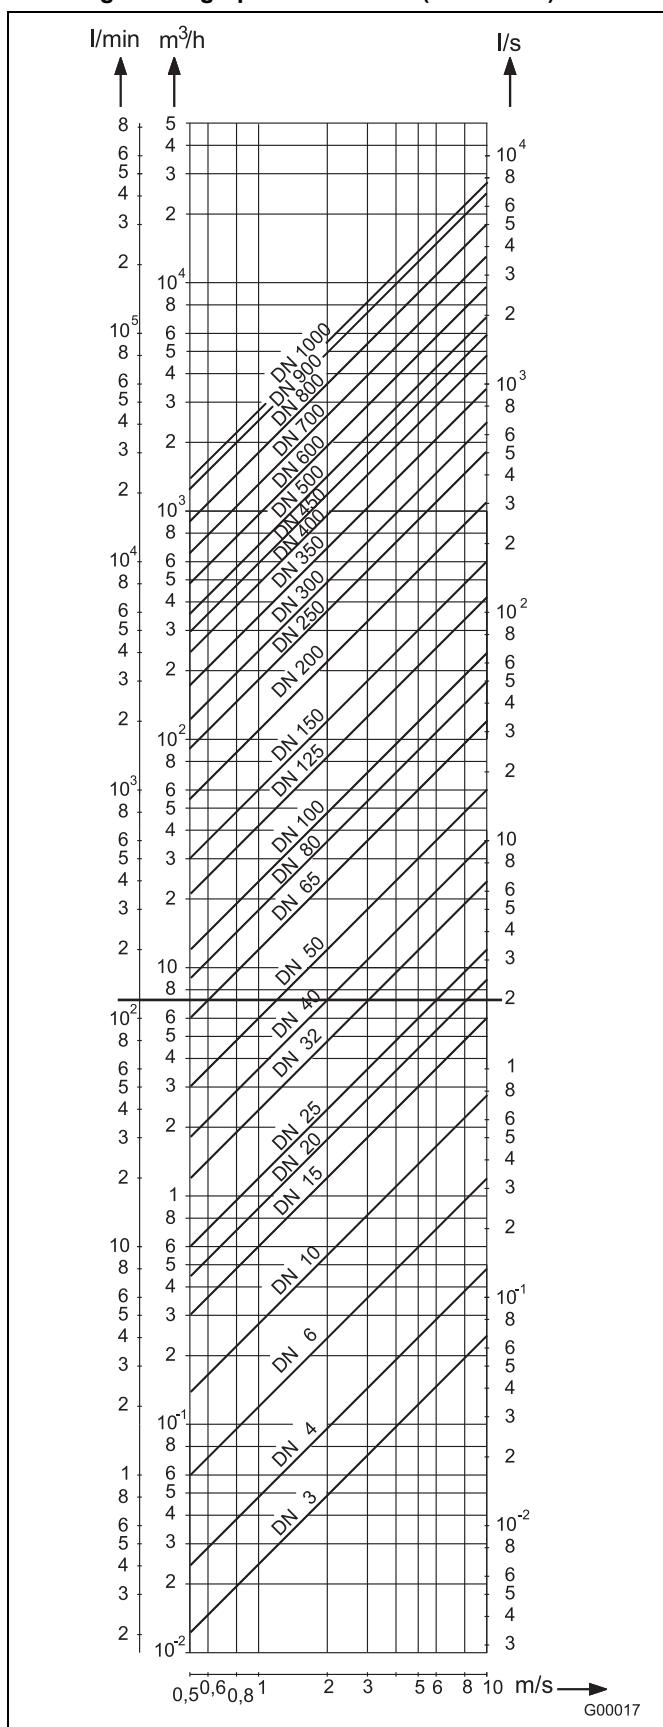

Flowrange nomograph DN 3 ... 1000 (1/10 ... 40")

Fig. 11

3.6 Approved EMF for custody transfer

Approvals

The design of the measurement instrument "Electromagnetic volume flowrate totalizer with electrical counter" has been approved by the National Institute for Science and Technology (Physikalisch-Technischen Bundesanstalt) in Braunschweig, Germany. The following approvals have been granted for the volume flowrate totalizer which consists of a flowmeter primary and a converter:

6.221	Electromagnetic volume flowrate totalizer with a Class "A and B" electrical counter for cold water and waste water
87.12	
5.721	Electromagnetic volume flowrate totalizer with electrical counter for liquids other than water
87.05	

Appendix (EO6) or Appendix 5 (EO5) of the certification regulations of 1988 apply to the electromagnetic volume flowrate totalizer with electrical counter.

Certification

The electromagnetic volume flowrate totalizer is certified on the test stands in Göttingen, Germany which have been approved for certification calibrations. After the calibration has been completed, the parameters which impact the certification regulations, can only be changed in the presence of a certification agent.

3.6.1 Approved flowmeter sizes for "cold water and waste water"

DN	Min. Allow. Flow Range End Value (approx. 2 m/s)	Max. Allow. Flow Range End Value (approx. 10 m/s)
25	2,4	m ³ /h
32	5	m ³ /h
40	9	m ³ /h
40	14	m ³ /h
65	24	m ³ /h
80	36	m ³ /h
100	56	m ³ /h
125	84	m ³ /h
150	128	m ³ /h
000	220	m ³ /h

300	500	m ³ /h
350	700	m ³ /h
400	900	m ³ /h
500	1420	m ³ /h
600	2000	m ³ /h
700	2800	m ³ /h
800	3600	m ³ /h
900	4600	m ³ /h
1000	5600	m ³ /h

3.6.2 Approved flowmeter sizes for "liquids other than water and chemical fluids"

Flowmeter Size and Maximum Allowable Flowrates				
DN		Q _{max} Liter/min		
25	Selectively	60 ... 200	In steps of	10
32	Selectively	100 ... 400	In steps of	20
40	Selectively	150 ... 750	In steps of	50
50	Selectively	250 ... 1000	In steps of	50
65	Selectively	400 ... 2000	In steps of	100
80	Selectively	700 ... 3000	In steps of	100
100	Selectively	900 ... 4500	In steps of	100
150	Selectively	2000 ... 10000	In steps of	500

Minimum Flowrates and Fluids		
DN	Minimum Flowrate Liter	Fluid
25	20	Beer
32	20	Beer
40	20	Beer, Milk
50	200	Beer, Wort
65	500	Milk, Wort, Beer
80	500	Milk, Wort, Beer
100	2000	Brine, Wort
150	2000	Brine

Min. flow range: approx. 2.5 m/s. Max. flow range approx. 10 m/s.
The actual flow ranges must be in accord with the values listed in the tables. Subsequent range changes require a new calibration on an agency certified test stand.

3.6.3 Installation requirements for volume flowrate totalizers

The following installation requirements are to be observed in each case:

For flow metering in one flow direction:

Cold/Waste Water	
In front of flowmeter primary	After flowmeter primary
5 x DN	2 x DN
Other Fluids (other than water)	
10 x DN	5 x DN

For flow metering in both flow directions:

Cold/Waste Water	
In front of flowmeter primary	After flowmeter primary
5 x DN	5 x DN
Other Fluids (other than water)	
10 x DN	10 x DN

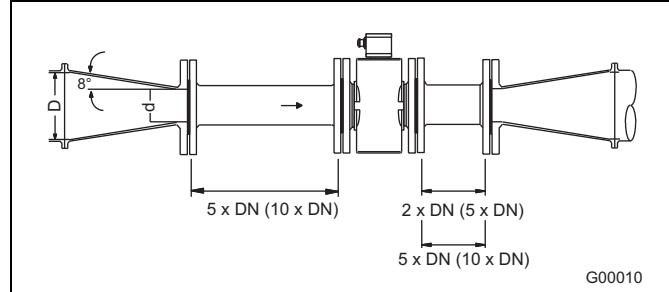

Fig. 12

4 Specifications:

4.1 Model DE41F, DE41W, DE43F, DE43W

4.1.1 General specifications

Min. allow. Pressure as a function of Fluid Temperature

Liner	Meter Size	Operation mbar abs.	at	T _{Operation} *
Hard rubber	15 ... 250 (1/2 ... 10")		0	< 90 °C (194 °F)
	300 ... 1000 (12 ... 40")		0	< 90 °C (194 °F)
Soft rubber	50 ... 250 (2 ... 10")		0	< 70 °C (158 °F)
	300 ... 1000 (12 ... 40")		0	< 70 °C (158 °F)
PTFE	10 ... 600 (3/8 ... 24")	270		< 20 °C (68 °F)
KTW approved	(3/8 ... 24")	400		< 100 °C (212 °F)
		500		< 130 °C (266 °F)
PFA	3 ... 100 (1/10 ... 4")	0		< 130 °C (266 °F)

* Higher temperatures are allowed for CIP/SIP cleaning for limited time periods, see Table „Maximum Allowable Cleaning Temperature“.

Max. Allowable-Cleaning Temperature

CIP-Cleaning	Liner	T _{max}	T _{max-minutes}	T _{Amb.}
Steam-cleaning	PTFE, PFA	150 °C (302 °F)	60	25 °C (77 °F)
Liquid-cleaning	PTFE, PFA	140 °C (284 °F)	60	25 °C (77 °F)

If the ambient temperature is > 25°C, then the difference must be subtracted from the max. cleaning temperature. T_{max} - Δ °C. Δ °C = T_{Amb.} - 25 °C.

Min. Allowable Ambient Temperature as a function of Fluid Temperature

For flowmeters with carbon steel flanges

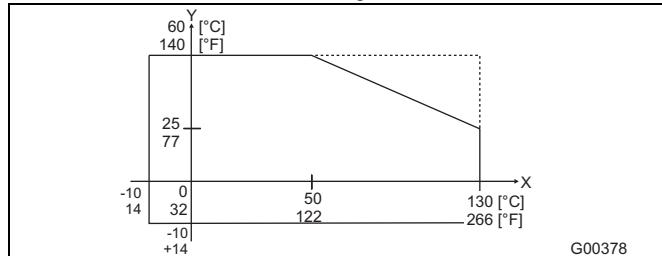

Fig. 13

For flowmeter with stainless steel flanges

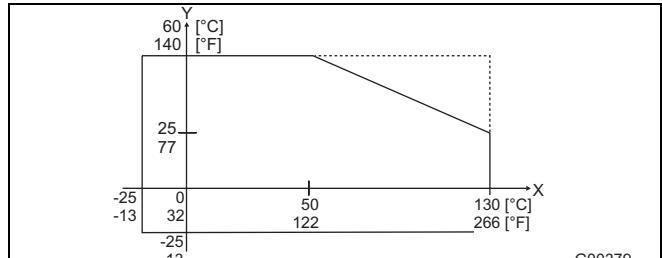

Fig. 14

- Y = Ambient temperature °C/°F
- X = Fluid temperature °C/°F
- Temperature range for COPA-XE
- Temperature range for MAG-XE

Notes regarding min./max. measuring temperature

Liner	Flange material	min. temp	max. temp
Hard-rubber	steel	-10 °C (14 °F)	90 °C (194 °F)
Hard-rubber	stainless steel 1.4571	-15 °C (5 °F)	90 °C (194 °F)
Soft-rubber	steel	-10 °C (14 °F)	70 °C (158 °F)
Soft-rubber	stainless steel 1.4571	-15 °C (5 °F)	70 °C (158 °F)
PTFE / PFA	steel	-10 °C (14 °F)	130 °C (266 °F)
PTFE / PFA	stainless steel 1.4571	-25 °C (-13 °F)	130 °C (266 °F)

Materials, Flowmeter Primary

Part	Standard	Options
Liner	PTFE, PFA, hard rubber, soft rubber	–
Signal and ground electrodes for		Hast. B-3 (2.4600), Hast. C-4 (2.4610), Titanium, Tantalum, Platinum-Iridium, 1.4539 [904L]
- Hard rubber, soft rubber	SS 1.4571 [316Ti]	
- PTFE, PFA	Hast. C-4 (2.4610)	SS1.4571[316Ti] Hast. B-3 (2.4600) Titanium, Tantalum, Platinum-Iridium, 1.4539 [904L]
Ground plate	SS 1.4571 [316Ti]	Upon request
Protection plate	SS 1.4571 [316Ti]	Upon request

Process Connection Materials

Part	Standard	Options
Flange	SS 1.4571 [316Ti] (standard) Steel (galvanized)	SS1.4571-[316Ti]
DN 450 ... 1000 (18 ... 40")	Steel (painted)	SS1.4571-[316Ti]

Part	Standard	Options
Housing	Two-piece cast aluminum housing, painted, paint coat 60 µm thick, RAL 9002	–
DN 3 ... 400(1/10 ... 16")		
DN 450 ... 1000 (18 ... 40")	Welded steel construction, painted, paint coat 60 µm thick, RAL 9002	–
Connection box	Cast alum., painted, 60 µm thick, frame: dark gray, RAL7012, cover: light gray, RAL 9002	–
Meter tube	SS 1.4301 [304]	–
PG-Connector	Polyamide	–

Storage Temperature

-20 °C (-4 °F) ... 70 °C (158 °F)

Protection Class per EN 60529

IP 67

IP 68 (only for MAG-XE flowmeter primary)

Pipeline Vibration Following EN 60068-2-6

The following applies for compact design FXE4000 (COPA-XE):

- In the range of 10 - 55 Hz max. 0.15 mm deflection
- In the range of 55 - 150 Hz max. 2 g acceleration

The following applies for separate converter (MAG-XE):

Converter

- In the range of 10 - 55 Hz max. 0.15 mm deflection

Flowmeter primary

- In the range of 10 - 55 Hz max. 0.15 mm deflection
- In the range of 55 - 150 Hz max. 2 g acceleration

Designs

The flanged flowmeters comply with the installation lengths defined in VDI/VDE 2641, ISO 13359 or DVGW (W420, Design WP, ISO 4064 short).

4.1.2 Material load for flanged design model DE41F / DE43F

Limits for the allowable fluid temperature (TS) and allowable pressure (PS) are a function of the liner and flange materials of the flowmeter (see instrument name plate).

Temperature limits

Liner	Flange material	min. temp	max. temp
Hard-rubber	Steel	-10 °C (14°F)	90 °C (194 °F)
Hard-rubber	Stainless steel 1.4571	-15 °C (5 °F)	90 °C (194 °F)
Soft-rubber	Steel	-10 °C (14°F)	70 °C (158 °F)
Soft-rubber	Stainless steel 1.4571	-15 °C (5 °F)	70 °C (158 °F)
PTFE / PFA	Steel	-10 °C (14°F)	130 °C (266 °F)
PTFE / PFA	Stainless steel 1.4571	-25 °C (-13 °F)	130 °C (266 °F)

1) Other press. ratings upon request.

2) If a ground ring (mounted on one side of the meter) is installed, the L dimension increases as follows: DN 3 ... 100 by 3 mm.

3) If protection rings (mounted on both sides of the meter) are installed, the L dimension increases as follows: DN 3 ... 100 by 6 mm.

4) If protection flanges (mounted on each ASME flange, old installation length) are installed, the L dimension increases as follows:

- DN 3 ... 80 by 20 mm

- DN 100 and larger by 25 mm

5) Connection flange DN 10

6) Connection flange 1/2"

7) For PFA liner and ASME flanges, only ISO installation lengths.

8) Connection dimensions according to EN 1092-1. For DN 65, PN 16 according to EN 1092-1 please order PN 40.

3) Connection dimensions for flanges acc. to DIN 2501 or ASME B16.5 or JIS B2210-10K

4) DN 65 / PN 16 with connection dimensions acc. EN 1092-1: Please order PN 40

5) Protection rings on both and grounding ring fastened on one side to flange,

only possible for primary <= DN 300 and PTFE / PFA lining

6) Only possible with ASME flanges old laid length (pressure rating codes P, Q) and primary with PTFE / PFA lining

7) possible from DN 500 (20 in.)

D141B038U01

4.2 Model DE 21, DE21F, DE23, DE23F

4.2.1 General specifications

Minimum Allowable Absolute Pressure

Liner	Meter Size	mbar abs.	at	Operation *
PFA	3 ... 100 (1/10 ... 4")	0		< 130 °C (266 °F)

*) Higher temperatures are allowed for CIP/SIP cleaning for limited time periods, see Table „Maximum Allowable Cleaning Temperature“.

Max. Allowable Cleaning Temperature

CIP-Cleaning	Liner:	T _{max}	minutes	T _{Amb.}
Steam cleaning	PFA	150 °C (302 °F)	60	25 °C (77 °F)
Liquid cleaning	PFA	140 °C (284 °F)	60	25 °C (77 °F)

If the ambient temperature is > 25, then the difference must be subtracted from the max. cleaning temperature.

$$T_{\text{max}} - \Delta \text{ °C. } \Delta \text{ °C} = T_{\text{Amb.}} - 25 \text{ °C.}$$

Maximum Allowable Temperature Shock

Liner	Temp Shock max. Temp. Diff. °C	°C/min
PFA	any	any

Min. Allowable Ambient Temperature as a function of Fluid Temperature

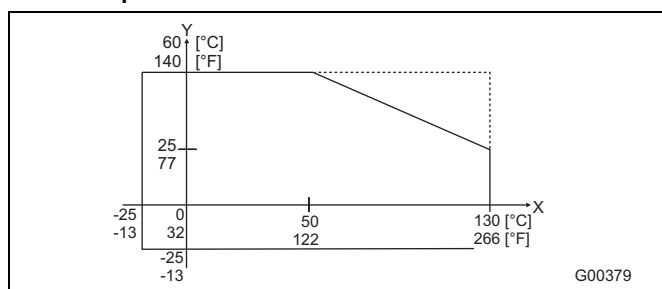

Fig. 25

- Y = Ambient temperature °C/°F
- X = Fluid temperature °C/°F
- Temperature range for COPA-XE
- Temperature range for MAG-XE

Materials, Flowmeter Primary

Liner	Electrode Material		Electrodes Design

Gasket Material

Process Connection	Gasket Material
Wafer design	None
Weld stubs, food ind. fittings, Tri-Clamp, external threads	EPDM (Ethylene-Propylene) with FDA approval, silicone with FDA approval
Housing gasket	Silicone

Storage Temperature

-20 °C (-4 °F) ... 70 °C (158 °F)

Protection Class per EN 60529

IP 67

IP 68 (only for MAG-XE flowmeter primary)

Pipeline Vibration Following EN 60068-2-6

The following applies for compact design FXE4000 (COPA-XE):

- In the range of 10 - 55 Hz max. 0.15 mm deflection
- In the range of 55 -150 Hz max. 2 g acceleration

The following applies for separate converter (MAG-XE):

Converter

- In the range of 10 - 55 Hz max. 0.15 mm deflection

Flowmeter primary

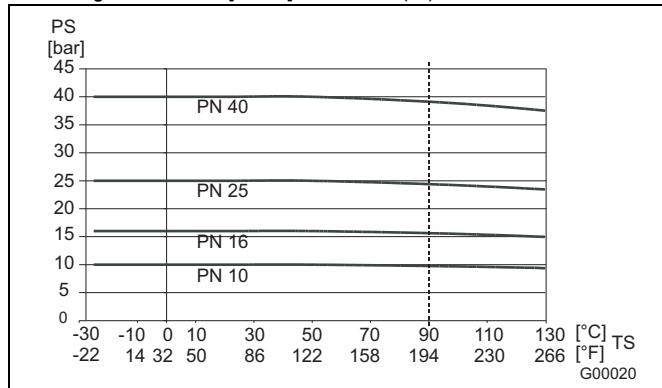

- In the range of 10 - 55 Hz max. 0.15 mm deflection
- In the range of 55 -150 Hz max. 2 g acceleration

5.1 Specifications:

Flow range	Continuously adjustable between 0.5 and 10 m/s
Max. accuracy	$\leq 0.5\%$ of rate $\leq 0.25\%$ of rate (option)
Reproducibility	$\leq 0.15\%$ of rate
Minimum conductivity	5 $\mu\text{S}/\text{cm}$ (20 $\mu\text{S}/\text{cm}$ for demineralized water)
Response time	For a step change 0-99 % (corresponds to $5\tau \geq 1\text{ s}$ for 6 1/2 Hz exciter frequency)
Supply power	High voltage AC: 100 - 230 V (- 15/+10 %) Low voltage AC: 16.8 - 26.4 V Low voltage DC: 16.8 - 31.2 V, ripple: < 5 %
Supply frequency	47 - 63 Hz
Magnetic field supply	6 1/4 Hz, 7 1/2 Hz, 12 1/2 Hz, 15 Hz, 25 Hz, 30 Hz (50/60 Hz supply power)
Power	$\leq 14\text{ VA}$ for AC supply power (flowmeter primary incl. converter) For AC supply power $\leq 6\text{ W}$ for DC supply power DC (flowmeter primary incl. converter)
Ambient temperature	-20 °C to +60 °C
Electrical connections	Spring loaded screwless terminals
Forward/Reverse flow metering	Flow direction is indicated by direction arrows in the display and signaled over the optocoupler output (ext. contact output).

5.2 Housing Variants

COPA XE

Compact design with converter housing made of cast light metal, painted, paint coat 60 μm thick, rear section RAL 7012 dark gray, front section (cover) RAL 9002 light gray

Option

Converter housing made of stainless steel [304]

MAG-XE

- Field mount housing made of cast light metal, painted, paint coat 60 μm thick, rear section RAL 7012 dark gray, front section (cover) RAL 9002 light gray
- Panel installation housing
- Housing for rail mounting

Weight

COPA-XE: see Data Sheet

MAG-XE (converter):

- Field mount housing: 4.5 kg
- Rail mount housing: 1.2 kg
- Panel installation housing 1.2 kg

Signal Cable (only for MAG-XE)

Max. cable length between flowmeter primary and converter: 50 m.

Scope of delivery: 10 m.

If more than 10 m is required, the cable can be ordered under the order number D173D025U01.

5.3 In- / Outputs

Isolation in- / outputs

The current output and the pulse output are isolated from the flowmeter primary circuit/ input circuit and from each other.

Current output (Terminals +/-)

0/4-20 mA load $\leq 600 \Omega$; 0/2-10 mA, load $\leq 1200 \Omega$; 0-5 mA, load $\leq 2400 \Omega$ selectable. Terminals: +/-

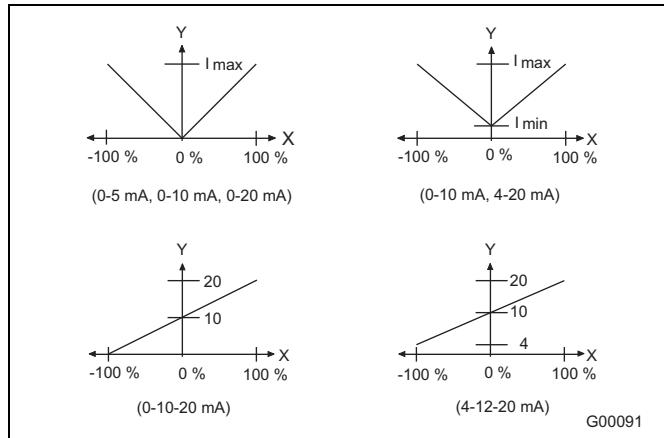

Fig. 37

Y = Current [mA]

X = Flow direction/flowrate

Scaled Pulse Output (Terminals V8, V9 or Ux, V8)

Scaled pulse output max. 5 kHz, pulse factor which can be set between 0.001 and 1000 is a multiplier for the value displayed ($1 \text{ pulse}/\text{m}^3 \times 1000$). The pulse width can be set between 0.1 ms and 2000 ms.

A change between an "active" or "passive" configuration can be made using jumpers.

Design	Optocoupler Passive	Active
Function	E9, C9	9, 10
Operating voltage	$U_{CEL} = 0 \dots 2 \text{ V}$ $U_{CEH} = 16 \dots 30 \text{ V}$	$U = 16 \text{ V} \dots 30 \text{ V}$
Operating current and frequency	$I_{CEH} = 0 \dots 0.2 \text{ mA}$ $I_{CEL} = 5 \dots 220 \text{ mA}$ $f_{max} \leq 5 \text{ kHz}$	$I = 20 \dots 150 \text{ mA}$ $f_{max} = 4 \text{ Hz}$ Pulse width: $\leq 50 \text{ ms}$ Pulse: $16 \text{ V} \leq 25 \text{ ms}$ On/off ratio: $\geq 1:4 (T_{on} : T_{off})$ $I = 2 \dots 20 \text{ mA}$ $f_{max} = 5 \text{ kHz}$ $U = 16 \dots 30 \text{ V}$

Contact output

The following functions can be assigned via the software:

System monitor	Normally opened or closed contact
Empty pipe	Normally opened or closed contact
Forward/Reverse	Contact closes for forward flow direction
Max-Alarm, Min-Alarm	Normally opened or closed contact
MAX-MIN-Alarm	Normally opened or closed contact
VR-Signal	Closed contact for forward direction signal

Optocoupler, (Terminals P7, G2 or Ux, P7)

$$U_{CEH} = 16 \dots 30 \text{ V}, U_{CEL} = 0 \dots 2 \text{ V}$$

$$I_{CEH} = 0 \dots 0.2 \text{ mA}, I_{CEL} = 2 \dots 220 \text{ mA}$$

Contact input

The following functions can be assigned via the software:

- Ext. Zero Return

When the pipeline empties all the outputs can be turned off.

- Ext. Totalizer Reset

The internal totalizer values can be reset via an external contact.

Optocoupler, Terminals X1, G2

$$U = 16 \dots 30 \text{ V}, R_i 2 \text{ k}\Omega$$

- Ext. Totalizer Stop

The flow integration can be stopped independently of the instantaneous flowrate.

Empty pipe signal

If the "automatic empty pipe detector" is enabled, a signal can be transmitted for an – empty pipe – condition.

In addition, the current output can be set to "low" or "high", and the pulse totalization is interrupted.

The "empty pipe detector" option requires a conductivity $\geq 20 \mu\text{S}/\text{cm}$, and a meter size $\geq \text{DN } 10$.

For the optocoupler specifications, see Contact Output.

5.4 Digital Communication

The converter offers the following digital communication options.

5.4.1 HART-Protocol

The flowmeter is registered with the HART Communication Foundation.

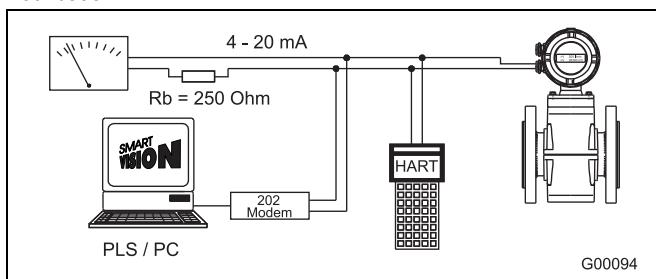

Fig. 38

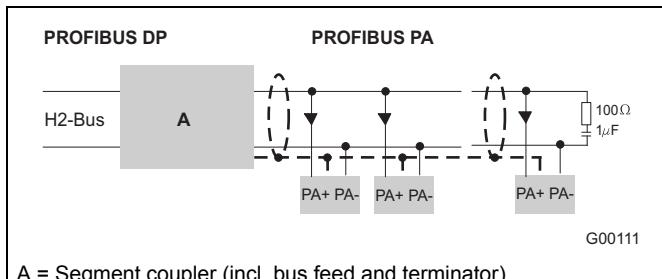

HART-Protocol	
Configuration	<ul style="list-style-type: none"> Directly on the device Software SMART VISION ® (+HART DTM)
Transmission	FSK Modulation on the current output 4-20 mA per Bell 202 Standard
Max. Signal-amplitude	1.2 mA _{pp}
Current output load:	min. 250 Ω, max. < 600 Ω
Cable	
Cable	AWG 24 twisted
Max. cable length	1500 m

For more detailed information see the separate Data Link Description

5.4.2 PROFIBUS PA Protocol

The data link conforms to Profile 3.0 (Standard PROFIBUS, EN 50170, DIN 19245 [PRO91]).

PROFIBUS PA Ident-No.:	0691 hex.
Alternative Standard-Ident-No.	9700 or 9740
Configuration	Directly on the device Software SMART VISION® (+PROFIBUS PA DTM)
Transmission signal	per IEC 61158-2
Cable	Shielded, twisted (Type A or B cables are preferred as defined in IEC 61158-2)

A = Segment coupler (incl. bus feed and terminator)

Fig. 39 Example for PROFIBUS PA connection

Bus topology

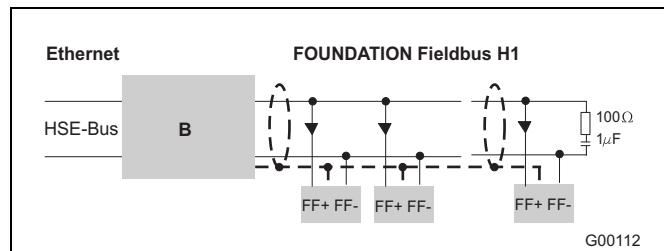

- Tree and/or linear structure
- Bus termination: Passive at both ends of the main bus cable (RC-component $R = 100 \Omega$, $C = 1 \mu F$)

Voltage / Current values

- Average current draw: 13 mA.
 - During a fault condition, the current is limited to max. 17 mA by the FDE function (=Fault Disconnection Electronic) integrated in the instrument.
 - The upper limit of the current is electronically limited.
 - The voltage on the bus must be within the range 9-32 V DC.
- For more detailed information see the separate Data Link Description

5.4.3 FOUNDATION Fieldbus (FF)

FF data link	Conforms to FF standard 890/ 891 and FF-902/90
Interoperability Test campaign no.	IT 019500
Manufacturer ID	0x000320
Device ID	0x0016
Configuration	<ul style="list-style-type: none"> Directly on the device Via services integrated in the system National Configurator
Transmission signal	per IEC 61158-2

B = Linking Device (incl. bus feed and terminator)

Fig. 40 Example for FOUNDATION Fieldbus connection

Bus topology

- Tree and/or linear structure
- Bus termination: Passive at both ends of the main bus cable (RC-component $R = 100 \Omega$, $C = 1 \mu F$)

Voltage / Current values

- Average current draw: 13 mA.
- During a fault condition, the current is limited to max. 17 mA by the FDE function (=Fault Disconnection Electronic) integrated in the instrument.
- Upper limit of the current: electronically limited.
- The voltage on the bus must be within the range 9-32 V DC.

Bus Address

The bus address is automatically assigned or it can be set manually in the system.

The address recognition is made by a unique combination of the Manufacturer-ID, Device-ID and Instrument Series-No.

System Connection

Required are:

- DD-File (Device Description), which contains the device description.
- CFF-File (Common File Format), required to engineer the segment. The engineering can be accomplished on- or offline.

Both files as well as the interface description are located on the supplied CD (part no.: D699D002U01). If required, it can be ordered from ABB at no cost.

The files required for operation can also be downloaded from the website <http://www.fieldbus.org>.

For more detailed information see the separate Data Link Description Part No. D184B093U17.

5.4.4 ASCII-Protocol

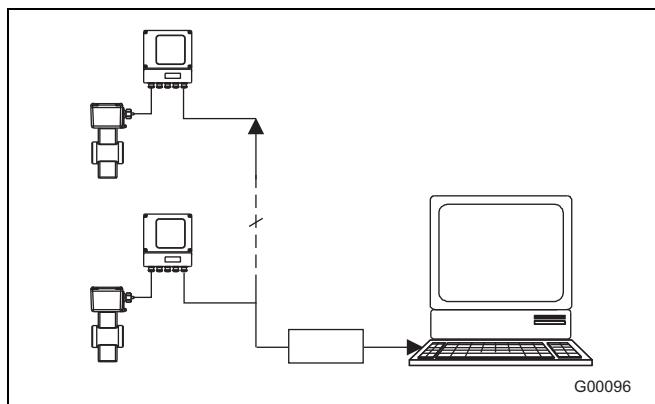

Fig. 41

ASCII-Protocol	
Transmission	RS485 data link
V _{pp} = 5 V. Input impedance:	≥ 12 kΩ
Cable	
Cable	Shielded, twisted pair
Max. cable length	≥ 1200 m
Baudrate	1200-9600
Terminals	A and B
Max. 32 Instruments on a single bus	

For more detailed information see the separate Data Link Description

5.4.5 PROFIBUS DP Protocol

The digital communication utilizes a PROFIBUS DP connection board.

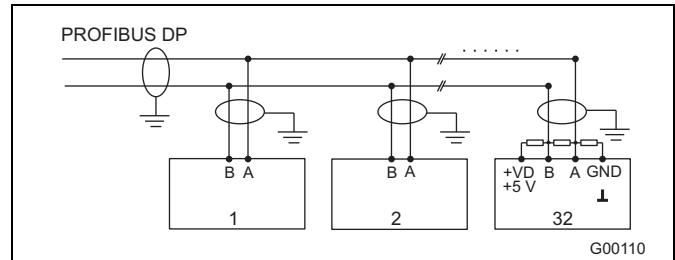

Fig. 42

Configuration	<ul style="list-style-type: none"> • Directly on the device • Software SMART VISION ®
Transmission	RS485 data link
Transmission speed	9.6 – 1500 Kbit/s
Protocol	per EN 50170
Ident-No.	6666 HEX
Cyclic (Output variables, see separate data link description for COPA/MAG-XE)	
Cable	Shielded, twisted pair
Max. cable length	1200 m (cable type A)
Baudrate	9.6 – 1500 Kbit/s
Characteristic resistance	135 – 165 Ω
Distributed capacitance	< 30 pF/m
Loop resistance	110 Ω/km

The max. tap line length is a function of the baudrate and the number of instruments.

Send and receive signals on the same terminal.

For more detailed information see the separate Data Link Description

Terminal	Function	Reference
+VD	VP	Supply voltage +5V
A	RxD / TxD-N	Receive/send-data-N
B	RxD / TxD-P	Receive/send-data-P
GND	C DGND	Data reference potential M5V

5.4.6 Interconnection Diagrams

5.4.6.1 FXE4000 (COPA-XE), analog communication (incl. HART)

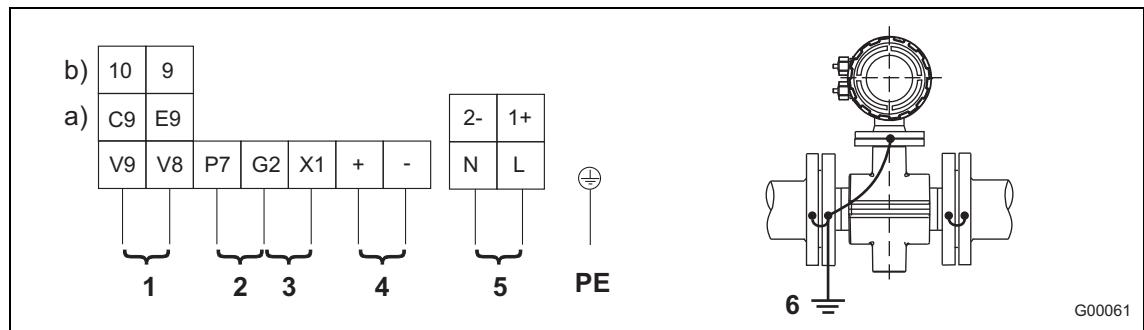

Fig. 43

1 a) Scaled pulse output, passive:

Pulse width adjustable from 0.1 to 2000 ms, terminals V8, V9, function E9, C9
 Optocoupler specifications: f_{max} 5 kHz, $0 \text{ V} \leq U_{CEL} \leq 2 \text{ V}$, $16 \text{ V} \leq U_{CEH} \leq 30 \text{ V}$,
 $0 \text{ mA} \leq I_{CEH} \leq 0.2 \text{ mA}$, $2 \text{ mA} \leq I_{CEL} \leq 220 \text{ mA}$

b) Scaled pulse output, active:

Pulse width adjustable from 0.1 to 2000 ms, terminals V8, V9, function 9, 10
 $20 \text{ mA} < I \leq 150 \text{ mA}$, $f_{max} \leq 4 \text{ Hz}$, pulse width $\leq 50 \text{ ms}$, pulse $T_{16V} \leq 25 \text{ ms}$; on/off ratio: 1:4
 $(T_{on} : T_{off})$, f_{max} 5 kHz, $2 \text{ mA} \leq I \leq 20 \text{ mA}$; $16 \text{ V} \leq U \leq 30 \text{ V}$

2 Contact output:

Function selectable via software to system monitor, empty pipe, max.-min.-alarm or V/R contact output*, terminals G2, P7
 Optocoupler specifications: f_{max} 5 kHz,
 $0 \text{ V} \leq U_{CEL} \leq 2 \text{ V}$, $16 \text{ V} \leq U_{CEH} \leq 30 \text{ V}$;
 $0 \text{ mA} \leq I_{CEH} \leq 0.2 \text{ mA}$, $2 \text{ mA} \leq I_{CEL} \leq 220 \text{ mA}$

3 Contact input:

Function selectable via software as external zero return, external totalizer reset, external totalizer stop, terminals G2, X1
 Optocoupler specifications: $16 \text{ V} \leq U \leq 30 \text{ V}$, $R_i = 2 \text{ k}\Omega$

4 Current output:

Adjustable, terminals +/-, Current $\leq 600 \Omega$ for 0/4 ... 20 mA,
 Current $\leq 1200 \Omega$ for 0/2 ... 10 mA, Current $\leq 2400 \Omega$ for 0 ... 5 mA,
 Option: HART-Protocol

5 Supply Power:

See name plate

6 Functional ground

*) The default factory setting is the "forward direction" signal.

5.4.6.2 FXE4000 (COPA-XE), digital communication

Valid for PROFIBUS DP, PROFIBUS PA, FOUNDATION Fieldbus, ASCII

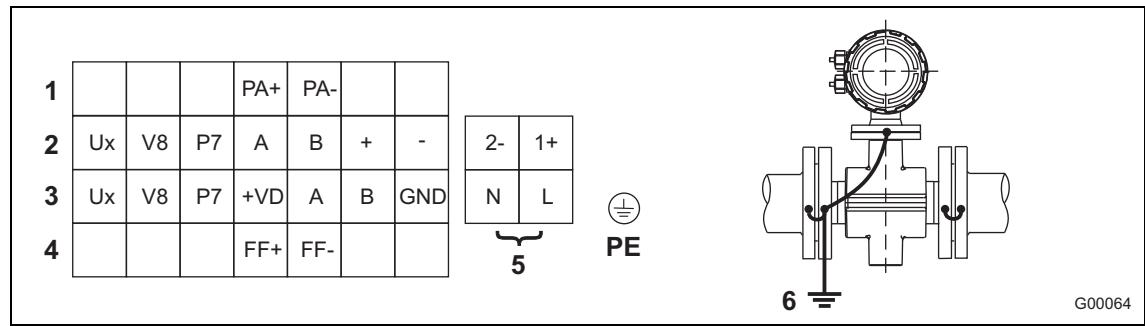

Fig. 44

1 PROFIBUS PA:

Terminals PA+, PA-: Connection for PROFIBUS PA according to IEC 61158-2 (Profile 3.0), U = 9 - 32 V, I = 13 mA (normal operation); 17 mA (fault condition / FDE)

2 ASCII-Protocol (RS485):

Terminals Ux, V8: Scaled pulse output, passive (Optocoupler), pulse width adjustable between 0.1 ms to 2000 ms,

Optocoupler specifications: f_{\max} 5 kHz, $0 \text{ V} \leq U_{\text{CEL}} \leq 2 \text{ V}$, $16 \text{ V} \leq U_{\text{CEH}} \leq 30 \text{ V}$, $0 \text{ mA} \leq I_{\text{CEH}} \leq 0.2 \text{ mA}$, $2 \text{ mA} \leq I_{\text{CEL}} \leq 220 \text{ mA}$

Terminals Ux, P7: Contact output, function selectable via software e.g. to system monitor, empty pipe, max. – min. –alarm or V/R contact output

Optocoupler specifications: f_{\max} 5 kHz, $0 \text{ V} \leq U_{\text{CEL}} \leq 2 \text{ V}$, $16 \text{ V} \leq U_{\text{CEH}} \leq 30 \text{ V}$, $0 \text{ mA} \leq I_{\text{CEH}} \leq 0.2 \text{ mA}$, $2 \text{ mA} \leq I_{\text{CEL}} \leq 220 \text{ mA}$

Terminals A, B: Serial data link RS485 for communication using ASCII-Protocol

Terminals +, -: Current output, terminals: +/-, current $\leq 600 \Omega$ for 0/4 to 20 mA

3 PROFIBUS DP:

Like design 2 but terminals +VD, A, B, GND connection for PROFIBUS DP according to EN 50170

4 FOUNDATION Fieldbus:

Terminals FF+, FF-: Connection for FOUNDATION Fieldbus (H1) according to IEC 61158-2, U = 9 ... 32 V, I = 13 mA (normal operation); 17 mA (fault condition / FDE)

5 Supply Power:

See name plate

6 Functional ground

5.4.6.3 FXE4000 MAG-XE, analog communication (incl. HART)

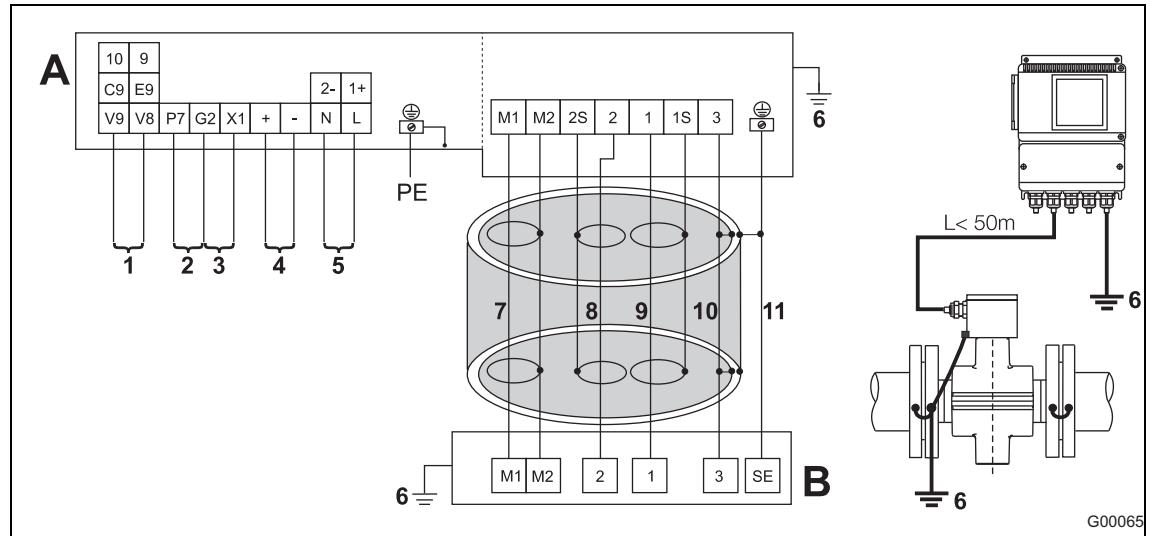

Fig. 45

1 a) Scaled pulse output, passive:

Pulse width adjustable from 0.1 to 2000 ms, terminals V8, V9, function E9, C9
 Optocoupler specifications: f_{max} 5 kHz, $0 \text{ V} \leq U_{CEL} \leq 2 \text{ V}$, $16 \text{ V} \leq U_{CEH} \leq 30 \text{ V}$,
 $0 \text{ mA} \leq I_{CEH} \leq 0.2 \text{ mA}$, $2 \text{ mA} \leq I_{CEL} \leq 220 \text{ mA}$

b) Scaled pulse output, active:

Pulse width adjustable from 0.1 to 2000 ms, terminals V8, V9, function 9, 10
 $20 \text{ mA} < I \leq 150 \text{ mA}$, $f_{max} \leq 4 \text{ Hz}$, pulse width $\leq 50 \text{ ms}$, pulse $T_{16V} \leq 25 \text{ ms}$; on/off ratio: 1:4
 $(T_{on} : T_{off})$, f_{max} 5 kHz, $2 \text{ mA} \leq I \leq 20 \text{ mA}$; $16 \text{ V} \leq U \leq 30 \text{ V}$

2 Contact output:

Function selectable via software to system monitor, empty pipe, max.-min.-alarm or V/R contact output*, terminals G2, P7
 Optocoupler specifications: f_{max} 5 kHz, $0 \text{ V} \leq U_{CEL} \leq 2 \text{ V}$, $16 \text{ V} \leq U_{CEH} \leq 30 \text{ V}$,
 $0 \text{ mA} \leq I_{CEH} \leq 0.2 \text{ mA}$, $2 \text{ mA} \leq I_{CEL} \leq 220 \text{ mA}$
